

# Land Survey Methodology Research Project ‘Fit for Purpose’for Brunei Darussalam

**Abdul Khaliq Bujang (Brunei Darussalam)**

**Key words:** Access to land; Cadastre; GNSS/GPS; Land readjustment; Standards; Cadastral; Cadastre; Cadastral Surveying

## **SUMMARY**

The Brunei Darussalam Survey Department was established in 1952 and is responsible for the administration, coordination, and survey of land for the public and government agencies in particular. The project is based on one of the meeting papers presented at the International Federation of Surveyors (FIG) Commission 7.2 of Cadastre and Land Management, Fit-for-purpose (FFP) Implementation on August 8, 2019 in Seoul, South Korea. Technical officers and colleagues from the Tutong District Survey Branch were chosen to carry out the project since they are experienced, high-potential, and knowledgeable in the field of cadastral and geodetic surveying. The goal of the project is to ensure efficiency in attaining optimal collection results using the most up-to-date technological land surveying system, as well as a unique flow process manual and new ideas.
