

Only center in Turkey with the **largest** satellite telemetry archive which can able to download data directly from various satellites.

## ITU Research and Application Center for Satellite Communications and Remote Sensing (CSCRS)

ITU – CSCRS is one of the forecoming institutions around the World with a highly capable ground receiving station unit and the first ground receiving station in Turkey with extensive imagery archive. It is also the first center established in Turkey to conduct application and research oriented projects in remote sensing and satellite technologies.

With is highly experienced staff and academic administrators, ITU – CSCRS has the capabilities of:

- acquiring images from remote sensing satellites (currently Spot 6&7, Pleiades 1A&1B)
- processing these images in different levels,
- providing images or value-added products to national and international users
