

**Research staff wanted in  
Civil Engineering and Geoinformation dept.  
Cyprus University of Technology**

**For 3d image modeling projects**

**Requirements:**

Programming skills in Matlab and/or c++ and/or visual basic. High level in at least one is expected.

Interoperability with .dlls would be considered an advantage.

3d geometry from images knowledge (Photogrammetry or machine vision disciplines) is also necessary

There are three possibilities:

1. In case he/she is a **Phd student**, it is necessary to have been already accepted in a University, be in the beginning of his/her research and the University must be willing to cooperate. Full time work is expected. 1750 euro/month
2. For **post doctorate research** the candidate should be <40 and had his Phd nominated at most 5 years ago. At least 70% of his/her time he/she must be dedicated to the project. At least 2250 euro/month, depending on skills and commitment.
3. Alternative contracting might also be considered, under current projects.

**Work:**

The researcher will be developing machine vision routines, according to research project needs. Guidance is provided, but initiative is crucial, as the University is young and embraces new ideas and research fields.

Please, feel free to send CV, or email me for further info.
