# Digital Transformation Impact

**+140.000.000**

Hectares under  
Incra's management

**973.500**

Families settled in agrarian  
reform projects

**300.000**

potential families for land  
regularization

**41**

Advanced Units

**886.635**

certified parcels (SIGEF\*)

**3.555.983,72 km<sup>2</sup>**

**6.638.462**

private and public rural  
properties registered(SNCR\*\*)

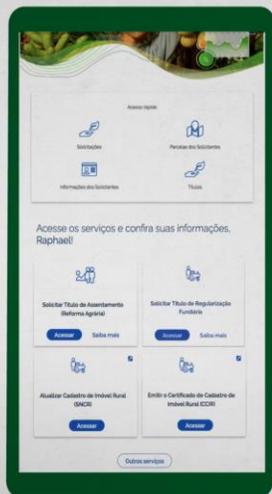

**29**

Regional Superintendencies

\*SIGEF – Land Management System – Certifies the boundaries of rural properties with precision of up to 50 cm

\*\*SNCR – National Rural Cadastre System – promotes the systematization of the collection and treatment of data and information on land use and possession

Títulos de  
Assentamento

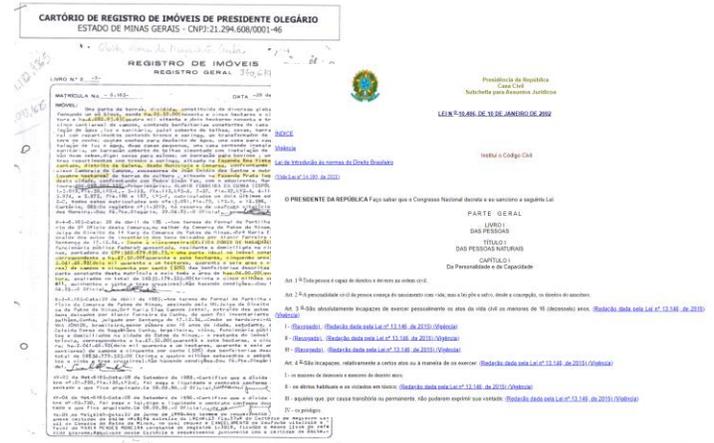

Regularização  
Fundiária

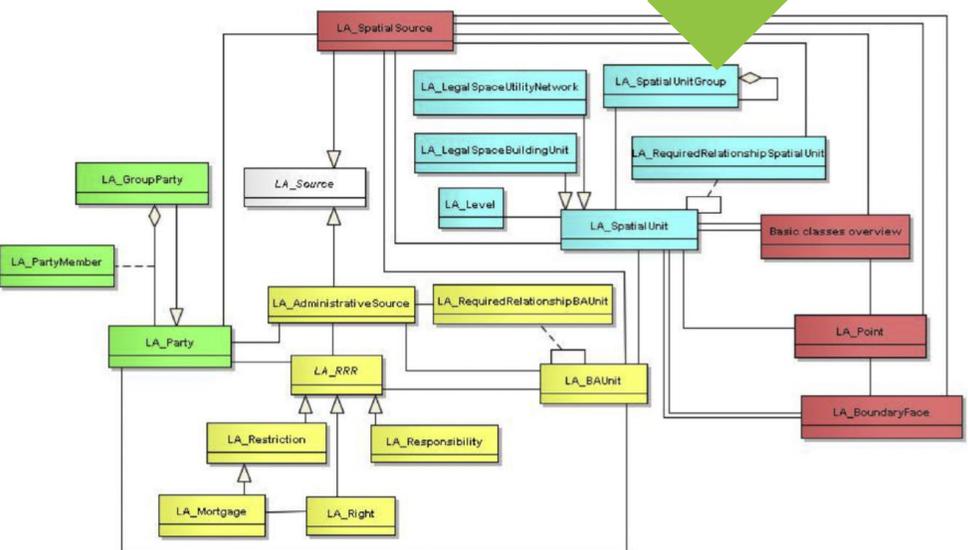

# Review Process

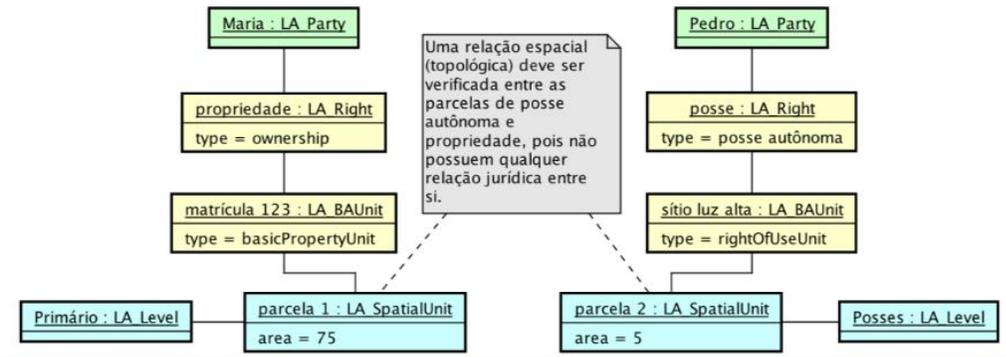

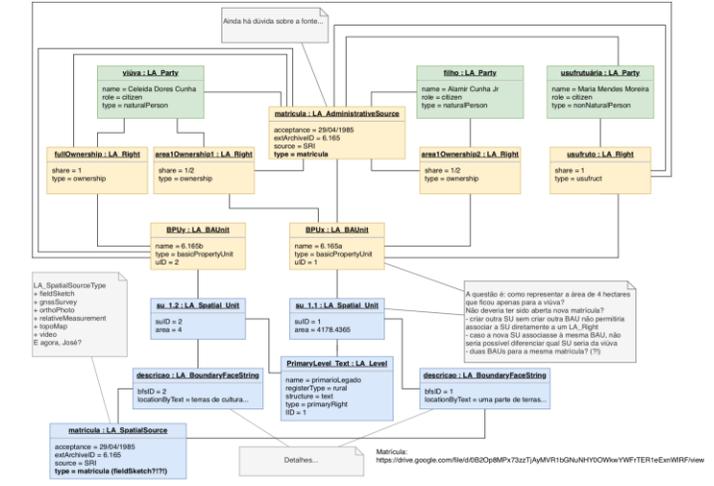

Conceptual and Normative Review (infralegal), based on LADM, since 2015

## 2) Brazilian Normatives

## 1) Conceptual Model and Standardized Language

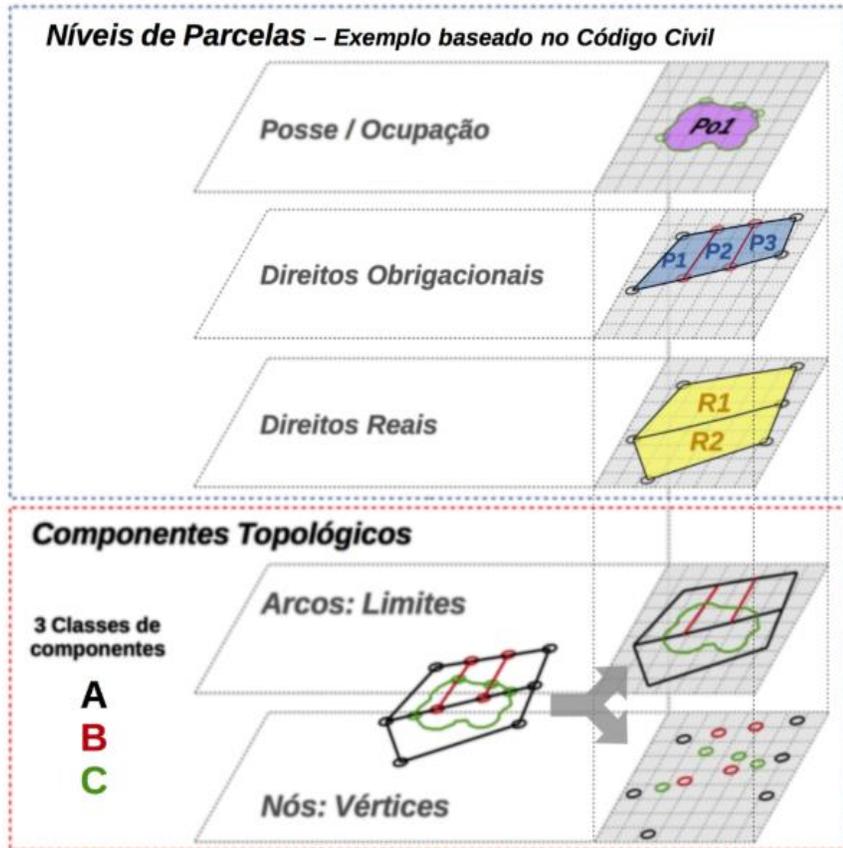

## 3) Model Application: (LADM\_BR profile) -> Standardized Representation of Any Situation

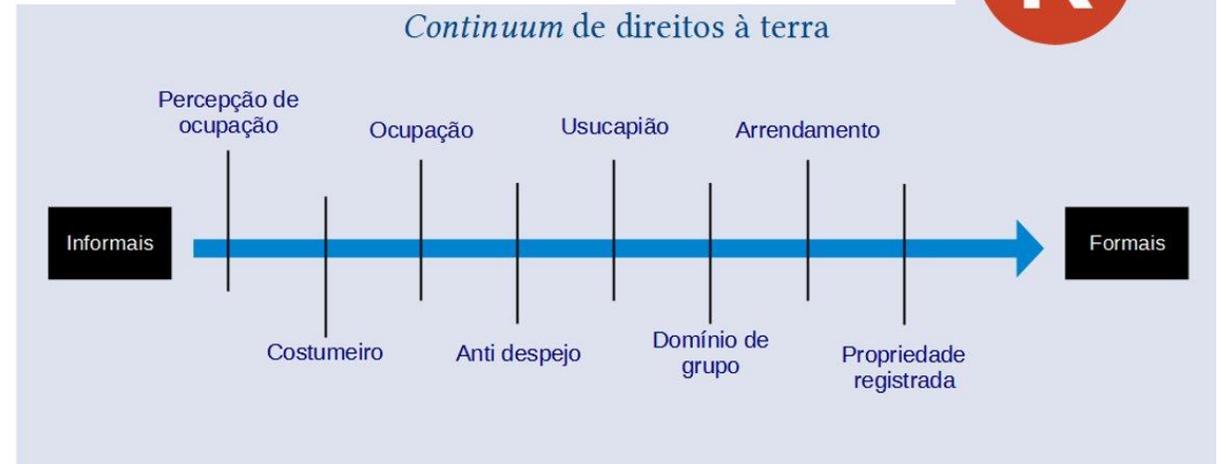

# Organization in Levels (LA\_Level)

Data of different legal natures are grouped using levels (LA\_Level class) allowing different interests over the same land.  
- e.g levels of simple possessions, property rights, contracts...

Scope expansion of legal relationships representation  
- e.g. simple possession (spatialized)

## Relationship between person and land

# Quality classes -> Fit for purpose

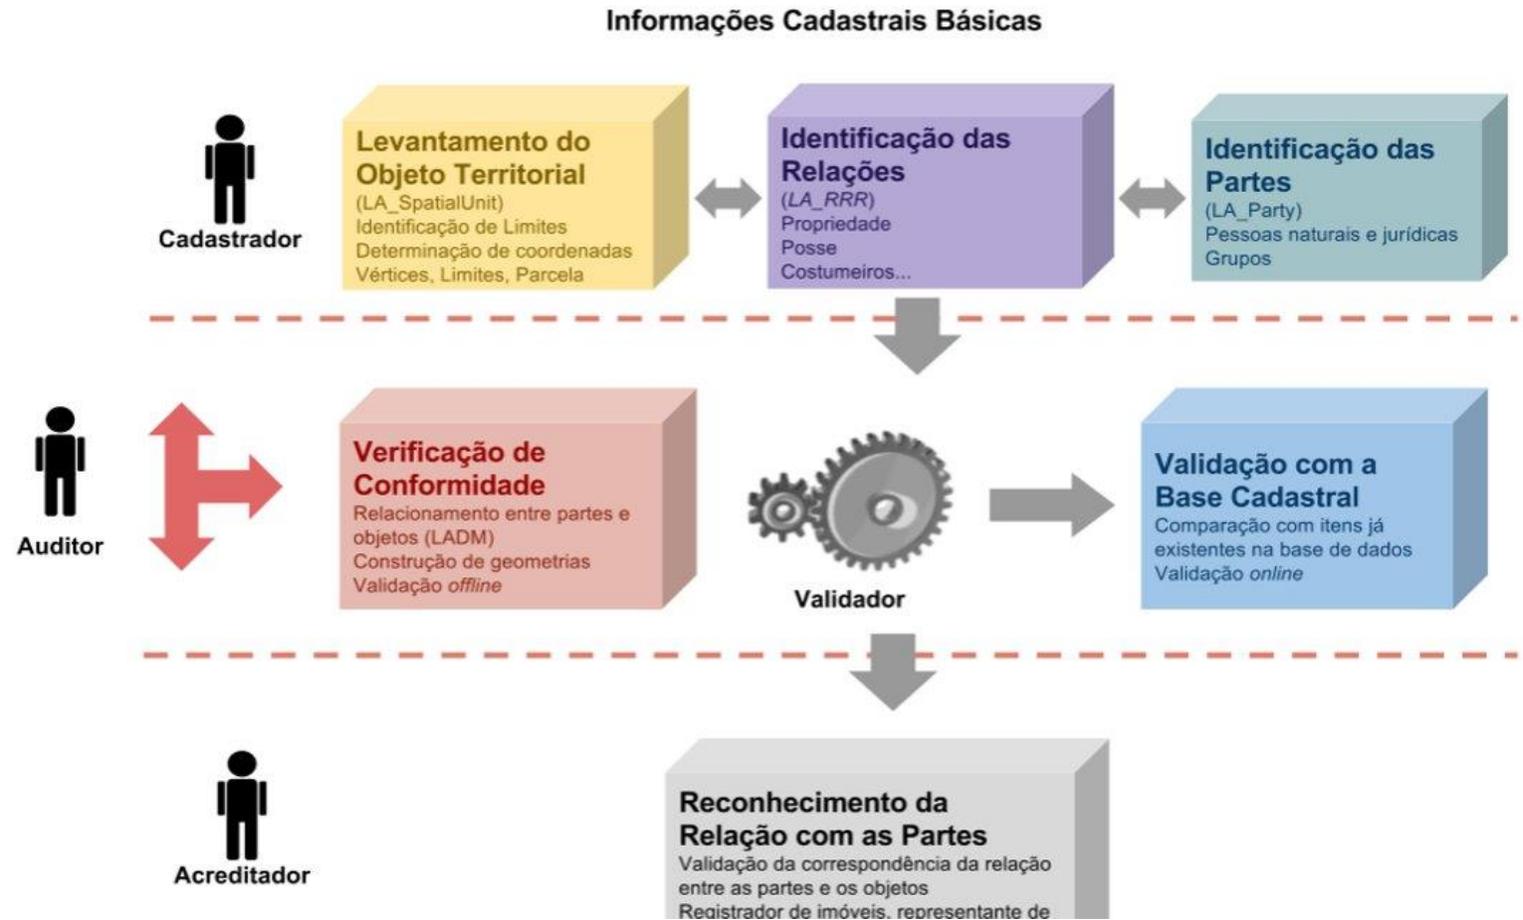

Using geospatial  
representation quality  
classes

- eg: simple methods,  
like smartphone  
positioning; citizens  
themselves produce the  
information

Class	Who	How	Level 1 e.g.: Property Rights (> 100 ha)	Level 2 e.g.: concession contracts	Level 3 possession/ occupation
A	Accredited Professional	Traditional: Classical Topography GNSS	X	X	X
B	Professional With Technical Responsibility	Traditional + Handheld GPS + Smartphone...		X	X
C	Citizen NGOs Unions	Web Interface OpenStreetMap Google Maps...			X

# A new tool

- ✓ Replacement of current cadastral tools by new and more efficient one.
- ✓ Simpler processes
  - 100% digital
  - Maximum automation
  - digital signatures
- ✓ Interoperability

## II Cycle of exchanges of experiences

*Technological solutions for land administration*

### Objectives:

- Continue identifying technological tools and solutions for land administration that have the potential for replicability in the various countries of the region.
- Support the generation of new knowledge and technical capacities among officials of land institutes and other strategic partners.
