# GNSS CORS in the Pacific

**FIG References Frame in Practice Seminar**

**Operational Aspects of GNSS CORS Technical Workshop**

Holiday Inn, Suva - Fiji

**PGSC Partnership Desk, GEM Division, Pacific Community (SPC)**

**National Geodesy & GNSS Networks Team, Geoscience Australia**

*18 September 2018*

# REGIONAL NETWORKS

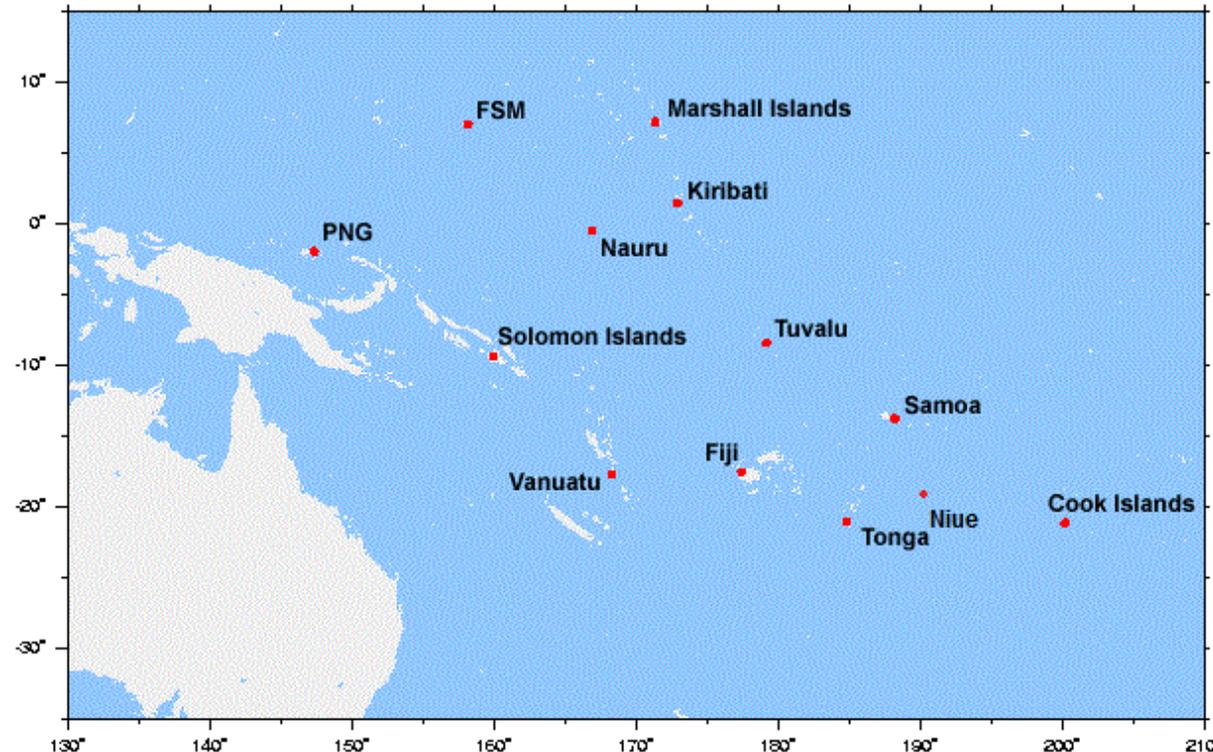

Australian Government  
Geoscience Australia

Pacific Community  
Communauté du Pacifique

- **SPRGN** – South Pacific Regional GNSS Network
  - 14 GNSS COR Stations
  - 13 Pacific Island Countries
  - Managed by GA, with the assistance of local government Lands & Survey or Weather offices

# REGIONAL NETWORKS

Australian Government  
Geoscience Australia

Pacific Community  
Communauté du Pacifique

- **SPRGN** – South Pacific Regional GNSS Network

# REGIONAL NETWORKS

Australian Government  
Geoscience Australia

Pacific Community  
Communauté du Pacifique

- **SPRGN** – South Pacific Regional GNSS Network

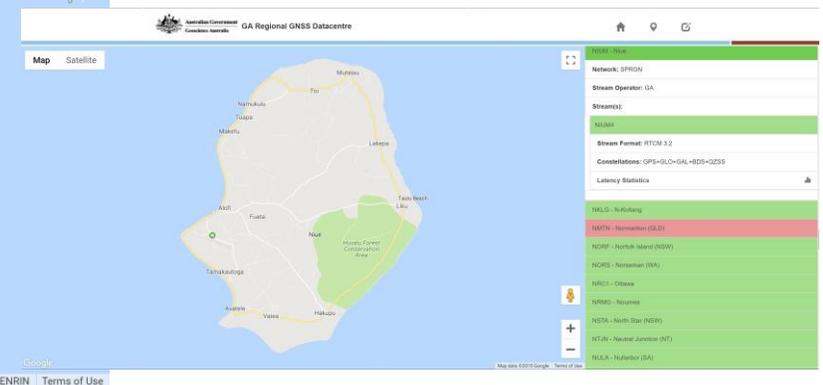

# REAL TIME GNSS NETWORK

- AUSCORS NTRIP Broadcaster
- Geoscience Australia (GA) provides 1 Hz data streaming from our Global Navigation Satellite System (GNSS) stations throughout Australia, Antarctica and the Pacific, with a mean latency of below 2 seconds.

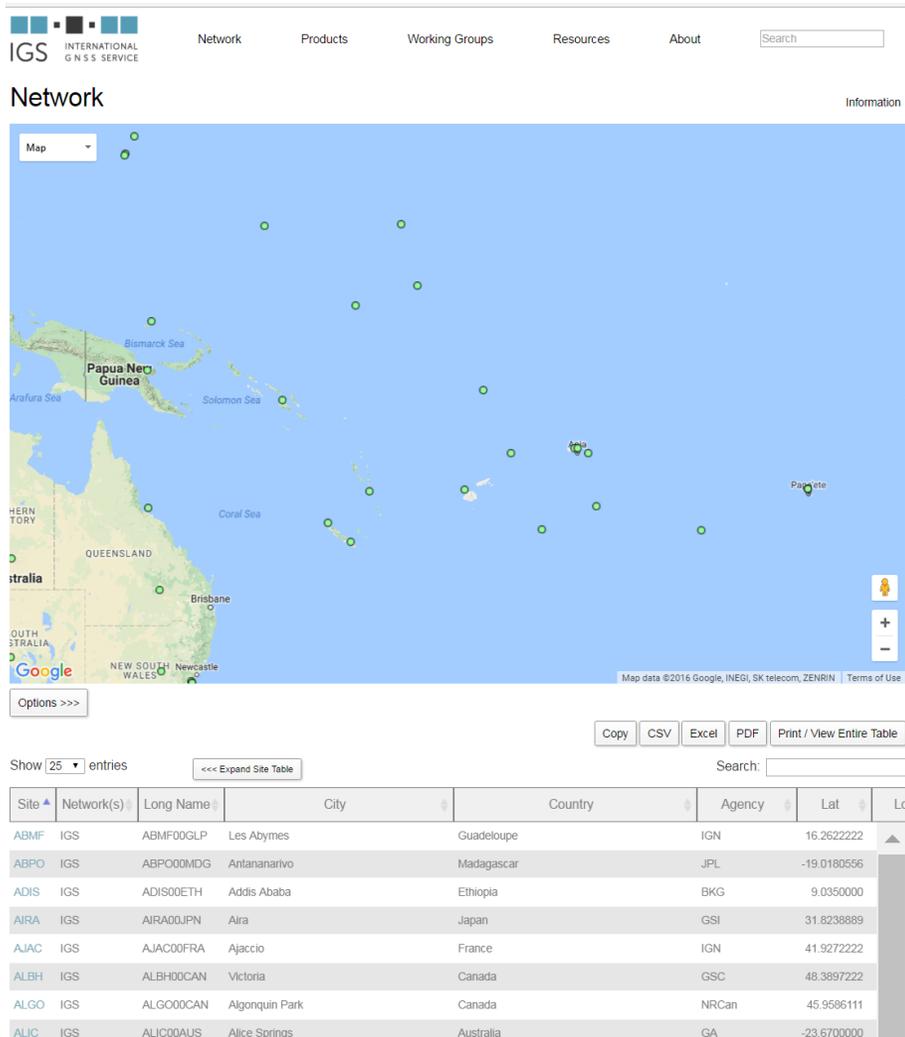

*The SPRGN GNSS CORS network was established primarily for scientific research, in particular the monitoring of crustal deformation and tectonic motion.*

*Real-time data is an additional benefit of these networks*

# GNSS STATION (CORS) – LAUTOKA, FIJI.

The **Pacific Sea Level & Geodetic Monitoring Project (PSLGMP)**, operates under the Climate and Oceans Support Program in the Pacific (COSPPac). It is a continuation of the 20-year South Pacific Sea Level and Climate Monitoring Project (SPSLCMP) since 1991

Comprises of a tide gauge network component, and geodetic monitoring component (GNSS CORS)

- To monitor sea level over a long time period, vertical crustal movement of the earth needs to be accounted for, to provide an absolute reading from the tide gauge

Geodetic monitoring component is maintained by Geoscience Australia

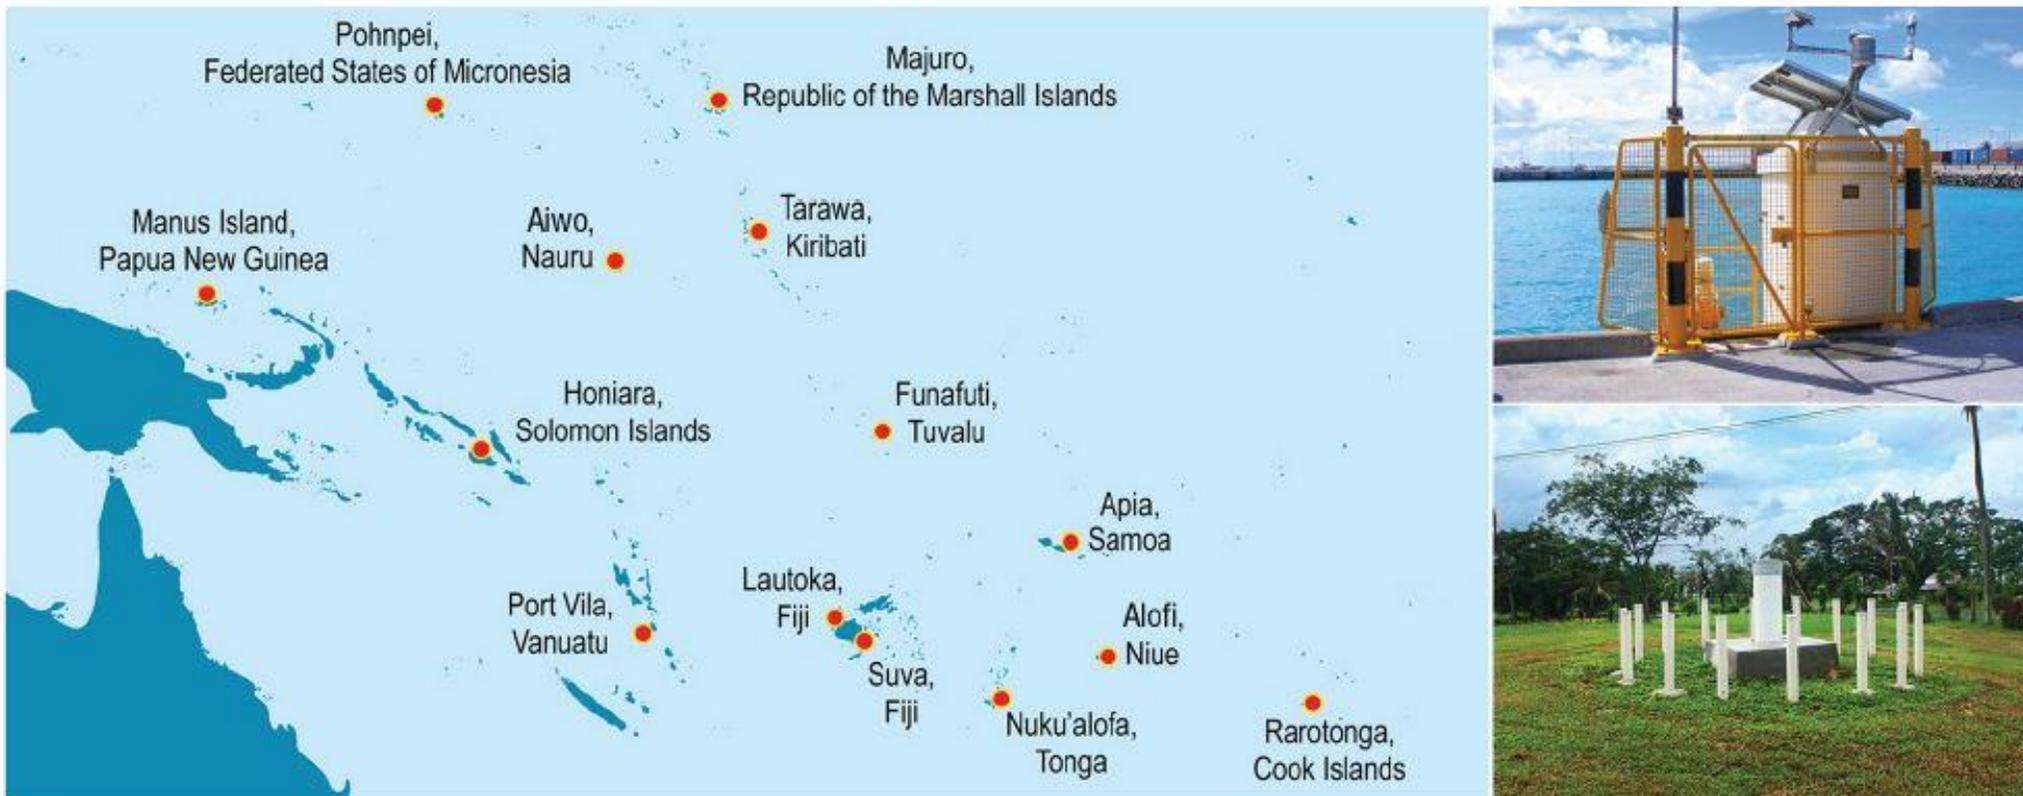

- Providing a Long term height time series of data
- Providing a Long term GNSS CORS data
- In a consistent, accurate, global geocentric terrestrial reference frame – ITRF2008
- Meeting accuracy requirements to match the expected sea level rise determined from over a century previous global tide gauge measurements of 1mm/annum

# PACIFIC SEA LEVEL & GEODETIC MONITORING PROJECT

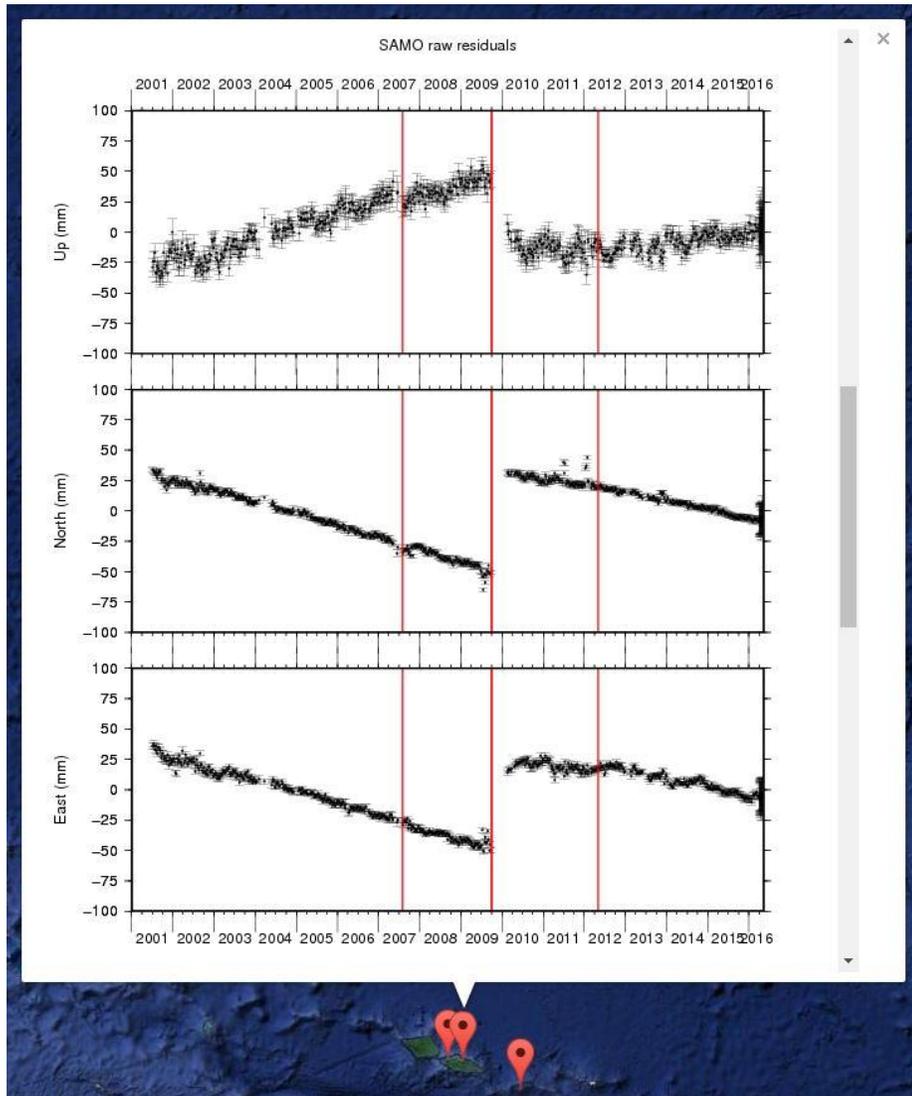

Earth Monitoring: Permanent GNSS CORS

Sea Level Monitoring: Permanent SEAFRAME station with continuous monitoring of instantaneous sea level

***Co-Location of this equipment at 13 sites in the region:***

# PACIFIC SEA LEVEL & GEODETIC MONITORING PROJECT

## Geodetic Coordinates and Velocities (ITRF2008)

Position: longitude (degrees minutes seconds), latitude (degrees minutes seconds), height (GRS80, metres)  
Velocity: East, North, Height (metres per year), Coordinate Epoch

# PACIFIC SEA LEVEL & GEODETIC MONITORING PROJECT

## GNSS CORS Data Access

GA Regional GNSS Datacentre

---

## AUSCORS NTRIP Broadcaster

---

Geoscience Australia (GA) provides 1 Hz data streaming from our Global Navigation Satellite System (GNSS) stations throughout Australia, Antarctica and the Pacific. The data is distributed via the [AUSCORS Ntrip Broadcaster](#). Access to the data is free, however a username and password is required. The real-time data is made available through an [RTCM](#) standard transmitted over the Internet using the [NTRIP](#) (Network Transport of RTCM via Internet Protocol).

To connect you will need:

- Username and password,
- [NTRIP client](#) and internet access,
- Connection details.

[Register for an Account](#)

### Connection Details

# PACIFIC SEA LEVEL & GEODETIC MONITORING PROJECT

**AUSPOS - Online GPS Processing Service**

- AUSPOS is a free online GPS data processing facility provided by Geoscience Australia
- AUSPOS takes advantage of both The IGS Stations Network and the IGS product range
- AUSPOS works with data collected anywhere on Earth
- Users submit their dual frequency geodetic quality GPS RINEX data observed in a 'static' mode to the GPS data processing system
- An AUSPOS report will be emailed to you (often in less than 5 mins) containing Geocentric Datum of Australia 1994 (GDA94) and International Terrestrial Reference Frame (ITRF) coordinates

**AUSPOS Submission Checklist**

Before submitting your GPS RINEX file/s, please ensure:

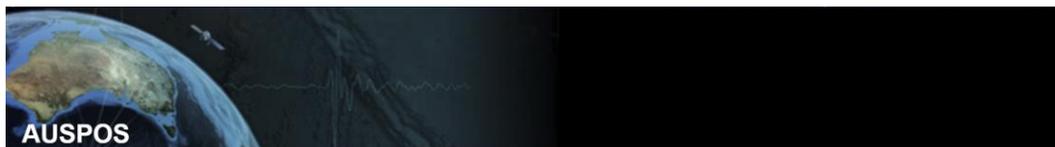

- The GPS RINEX file/s contains more than one hour (preferably two) of GPS data
- The GPS RINEX file/s do not contain any data from the current UT day
- The GPS RINEX file/s do not contain more than seven days of data
- The GPS RINEX file/s names do not contain spaces
- When submitting multiple files, ensure the first four characters / numbers of the file names are not the same
- You have used the IGS naming convention for the antenna type (refer the National Geodetic Survey (NGS) for more information)
- The antenna height provided is the vertical distance from the ground mark to the Antenna Reference Point (ARP)

Submit your data to AUSPOS

**AUSPOS FAQ's**

- AUSPOS - Step by Step
- Section 1 - Introduction to AUSPOS
- Section 2 - RINEX Data
- Section 3 - How AUSPOS Works
- Section 4 - Understanding the Results
- Section 5 - GPS Antennas
- Section 6 - Trouble Shooting

# PACIFIC SEA LEVEL & GEODETIC MONITORING PROJECT

- Increasing the confidence of measurements:
  - Local deformation of equipment

# PACIFIC SEA LEVEL & GEODETIC MONITORING PROJECT

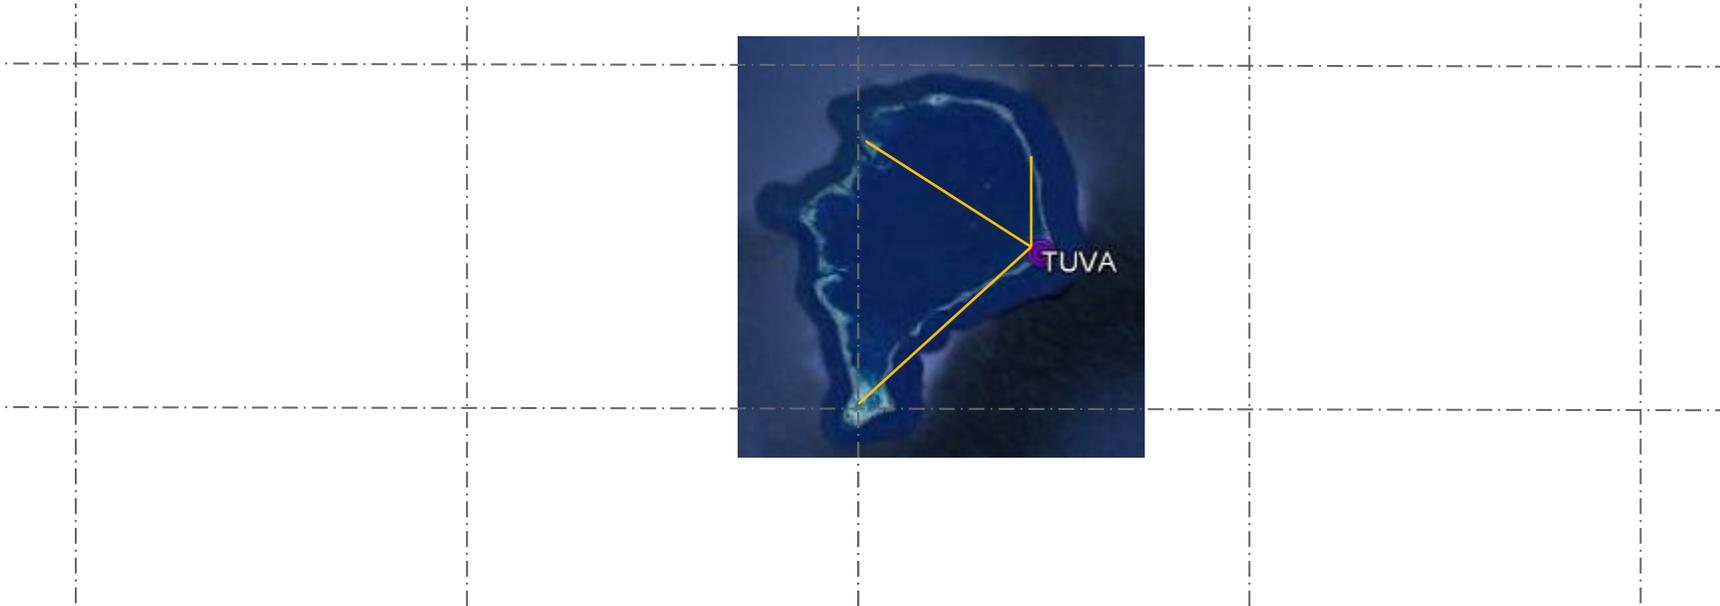

- Increasing the confidence of measurements:
  - Validation of tide gauge readings

We can measure the movement of the land using GNSS CORS

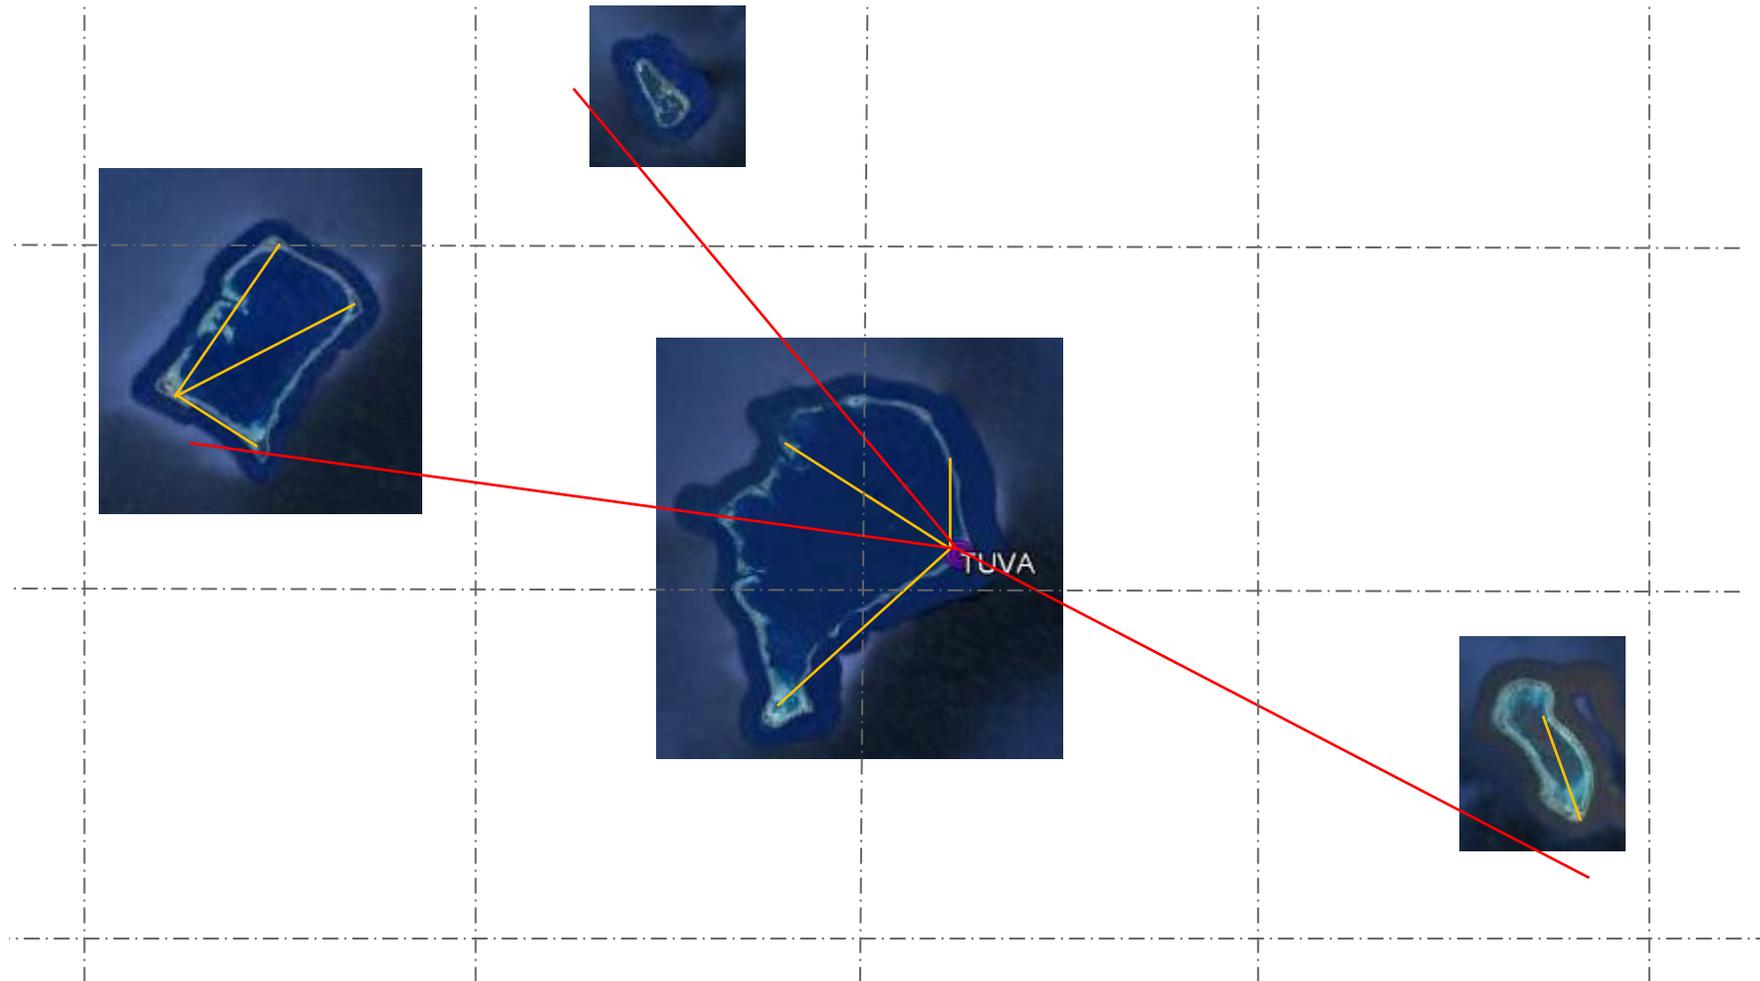

# BENEFITS OF GNSS CORS TO LOCAL SURVEYING

- A local GNSS CORS site can provide the opportunity to perform accurate baseline measurements when the user only has 1 geodetic quality GNSS receiver available.

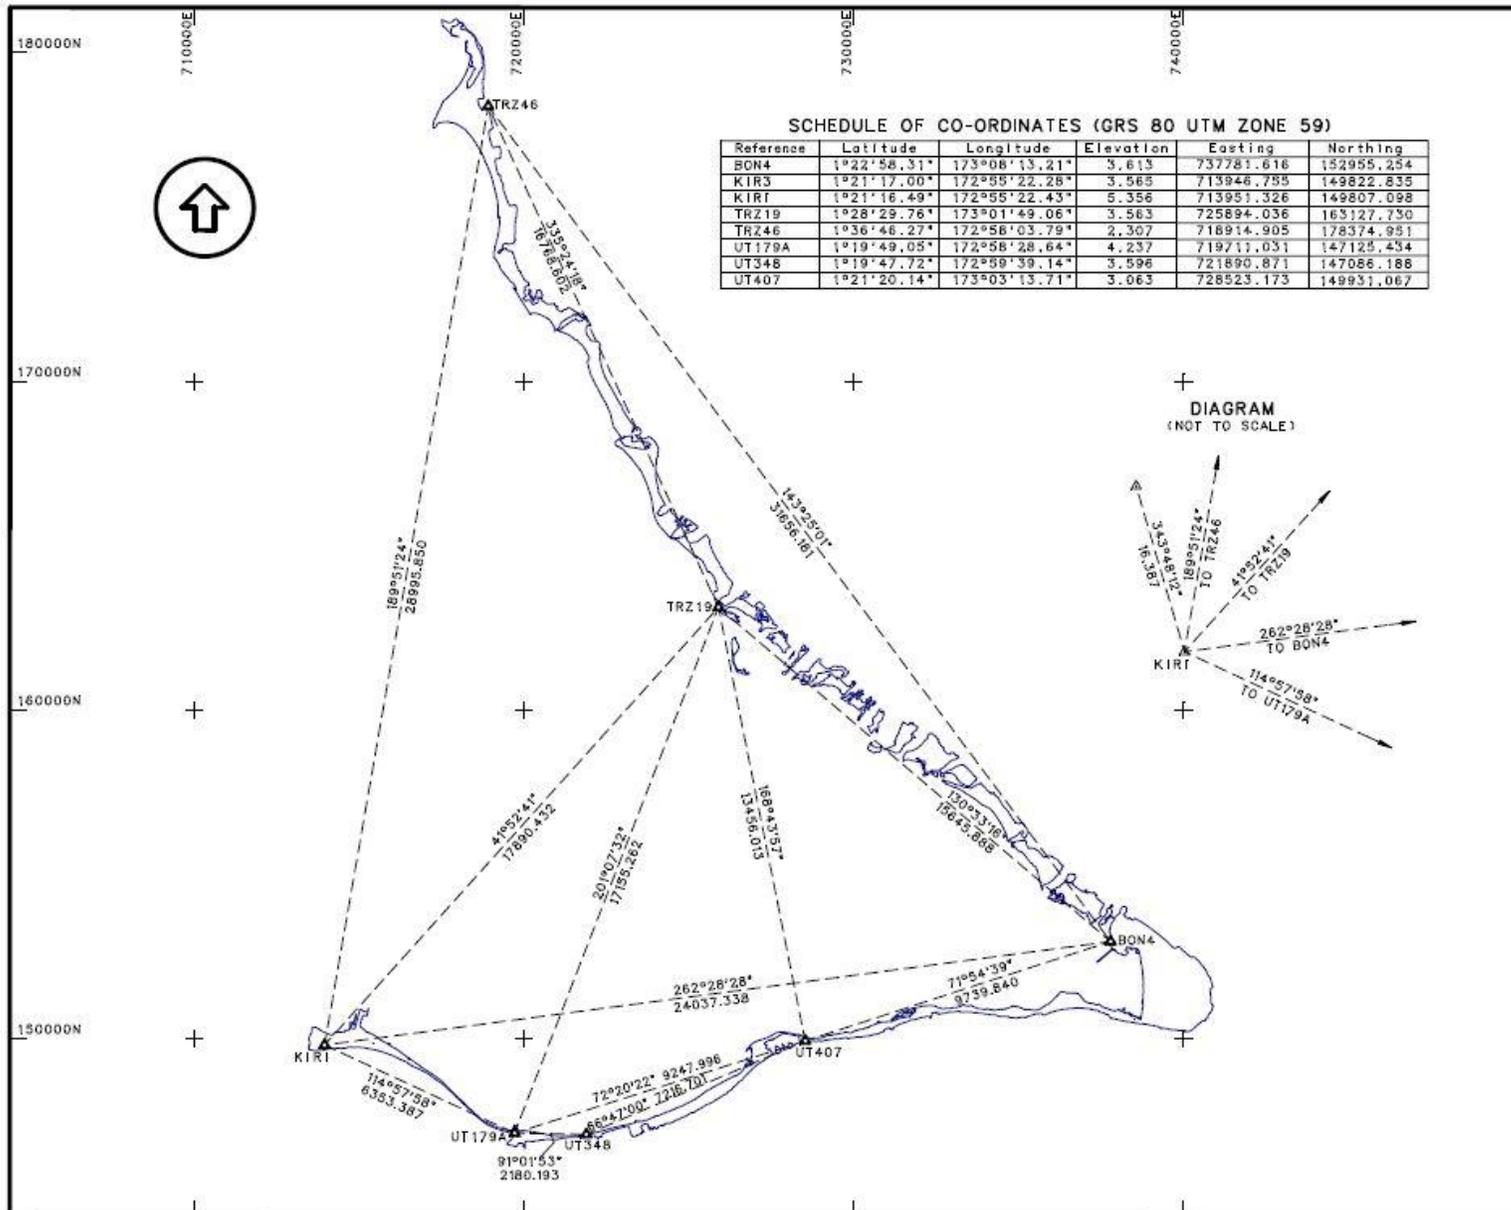

Having observations from a permanent reference station available will allow local Lands & Survey departments to update their current network of survey control from a Local coordinate system onto the International Terrestrial Reference Frame [currently ITRF2008].

# BENEFITS OF A GNSS CORS TO LOCAL SURVEYING

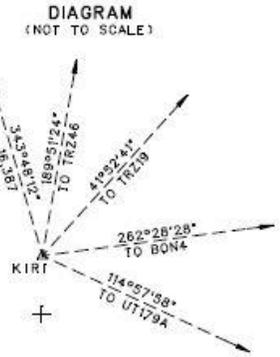

The distance & azimuth between parts of the country that may once have been known to only a low accuracy, can now be measured to the mm

**SCHEDULE OF CO-ORDINATES (GRS 80 UTM ZONE 59)**

Reference	Latitude	Longitude	Elevation	Easting	Northing

- Notes and Purpose**
- ALL SURVEY MARKS USED ARE OLD GROUND CONTROL POINTS.
  - THIS SURVEY WAS CARRIED OUT BY TRIMBLE GEO SYSTEM GLOBAL POSITIONING SYSTEM (GPS) R6 SERIES.
  - INTERVISIBILITY BETWEEN STATIONS IS NOT GUARANTEED.
  - ALL DISTANCES SHOWN ARE SPHEROIDAL ROUNDED OFF TO THREE DECIMAL PLACES AND ALL BEARINGS SHOWN ARE CHORD BEARINGS ROUNDED OFF TO NEAREST SECOND.
  - THE KIRIBATI GPS STATION, WHICH IS PART OF THE SOUTH PACIFIC SEA CLIMATE MONITORING PROJECT WAS USED AS THE BASE STATION FOR THIS PROJECT.
  - ALL THE ELEVATIONS ARE REFERRED TO MEAN SEA LEVEL DATUM.
  - SURVEY PERSONNEL INVOLVED IN THIS SURVEY ARE :- ROMANO REO, MARGIETI RATETA, DAOTIN ENARI, TIVERE TOORUA, KATAEBATI BUNATAUA, TEMARO TAUMEABO, TION URIAM (FISHERIES DEPARTMENT) & ANDRICK LAL (ISOPAC).

**Known as Tarawa GPS Primary Control Survey Network**  
 Island of Tarawa Country of Kiribati (Gilbert Group)

SURVEY OFFICE  
**50**

# BENEFITS OF A GNSS CORS TO LOCAL SURVEYING

- Local & Regional Benefits:
  - Strong local coordinated network is necessary for infrastructure and asset management.
  - Provide a common reference between local data sets (sea floor mapping, land surveys, aerial photography) & allowing various GIS applications
  - Integration of data sets across the region (fisheries, maritime boundaries, large scale environmental monitoring, disaster management)

# CHALLENGES OF GNSS CORS

- Power Supply
- Data Storage (Local Server -> Cloud)
- Communications (internet)
- Good Coordination with Local Contact
  - Infrastructure and asset management.
