

## Specialization of the Land Administration Domain Model (LADM) *A Legal approach*

16-5-2013

Jesper M. Paasch (Lantmäteriet), Peter van Oosterom (TU Delft), Jenny Paulsson (KTH Royal Institute of Technology) and Christiaan Lemmen (Kadaster)

FIG Working Week, Environment for Sustainability  
6 – 10 May 2013, Abuja, Nigeria.

## Land Administration Domain Model ISO 19152 (LADM)

- Model includes:
  - Spatial part (geometry, topology)
  - Extensible frame for legal/admin parts

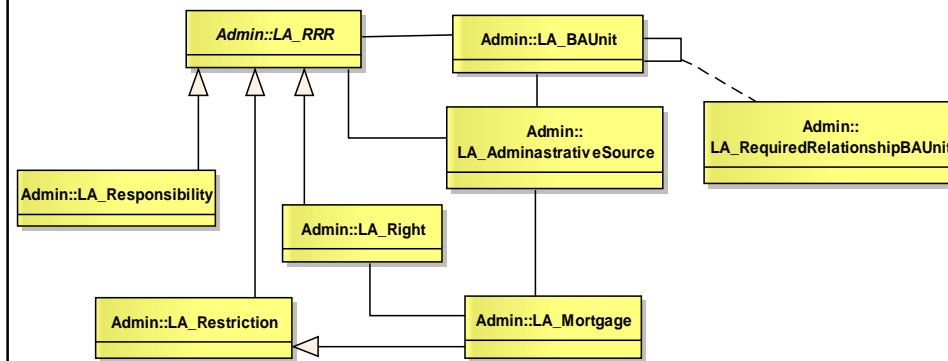

- Stared within the FIG in 2002
- FIG proposed LADM to ISO/TC211, January 2008 (parallel voting in ISO TC211 and CEN TC287)
- Published by ISO, December 2012
- Includes **integrated 2D and 3D** support

## LADM: Administrative (legal) package

- RRR (Right Restriction Responsibility) has associations with Party (Person) and Basic Administrative Unit (and indirectly to SpatialUnit)
- RRRs are in principle based on **legal documents** or decisions
- A RRR can be temporal

Class Administrative Package

## The LADM provide a rather coarse classification

- Right  
"action, activity or class of actions that a system participant may perform on or using an associated resource"
- Restriction  
"formal or informal obligation to refrain from doing something"
- Responsibility  
"formal or informal obligation to do something"

## Legal Cadastral Domain Model (LCDM)

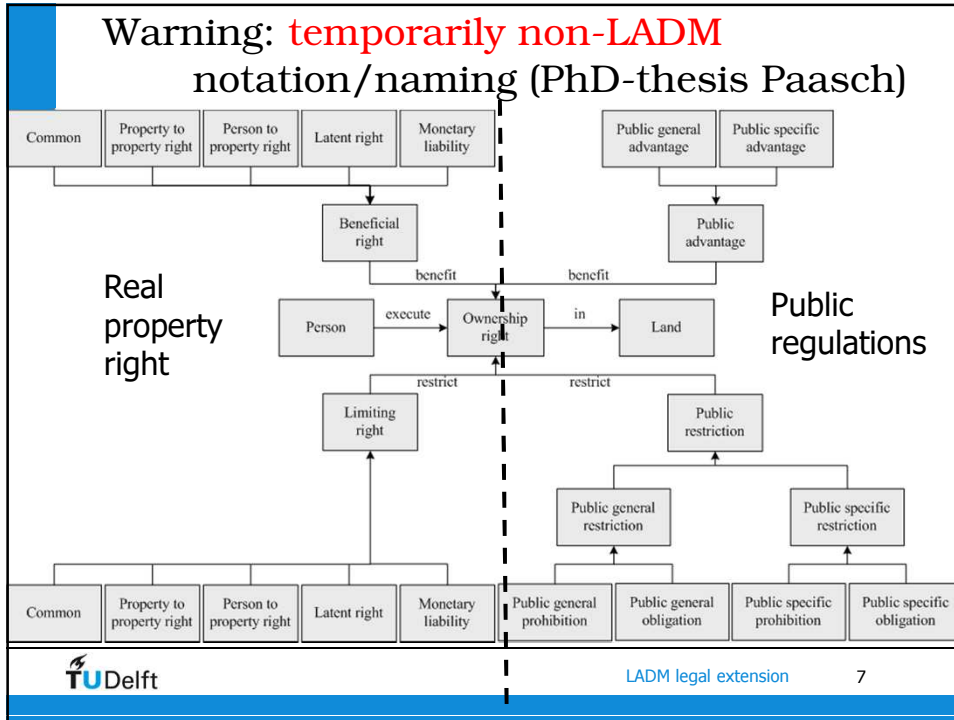

- A more detailed classification of rights, restrictions and responsibilities than LADM
- Based on how they influence ownership ← central concept
- *PhD-thesis Jesper Paasch (KTH, September 2012)*  
*Standardization of Real Property Rights and Public Regulations*  
*– The Legal Cadastral Domain Model*

## Some rights and restrictions

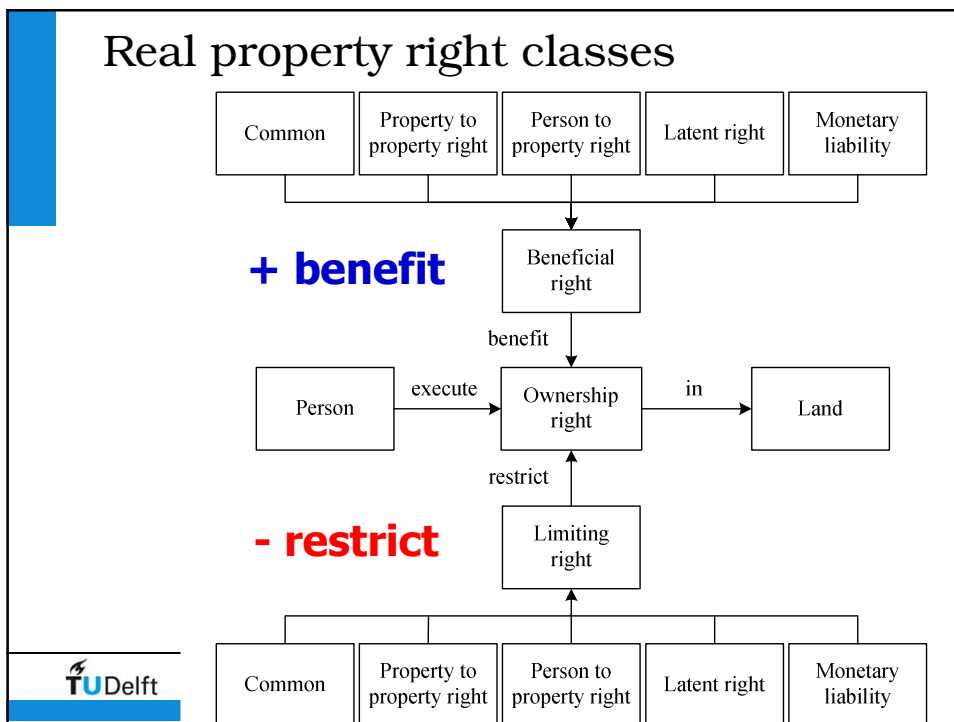

(from Sweden, Ireland, Germany, the Netherlands and Portugal)

<i>Possibility of reverter</i>	<i>Easement</i>	<i>B.P. right</i>	<i>Freehold covenant</i>
<i>Beschränkte persönliche Dienstbarkeiten</i>			<i>Erbbaurecht</i>
<i>Grunddienstbarkeit</i>	<b>Ownership</b>	<i>Gemensamhetsanläggningar</i>	
<i>Wayleave</i>	<i>Servidão de Estilício</i>	<i>Profít á pendre</i>	
<i>Servitut</i>	<i>Niessbrauch</i>	<i>Erfdienstbaarheid</i>	<i>Building lease</i>
<i>Right of entry or re-entry</i>	<i>Bearbetningskonsession</i>	<i>Rentenschuld</i>	
	<i>Vruchtgebruik</i>	<i>Leasehold</i>	<i>Detaljplan</i>
<i>Emphyteusis</i>	<i>Mortgage</i>	<i>Opstal</i>	<i>Grundschild</i>
<i>Reallast</i>	<i>Usufruct</i>	<i>Erfpacht</i>	<i>Lien</i>
			<i>Right of pre-emption</i>

Warning: temporarily non-LADM notation/naming (PhD-thesis Paasch)

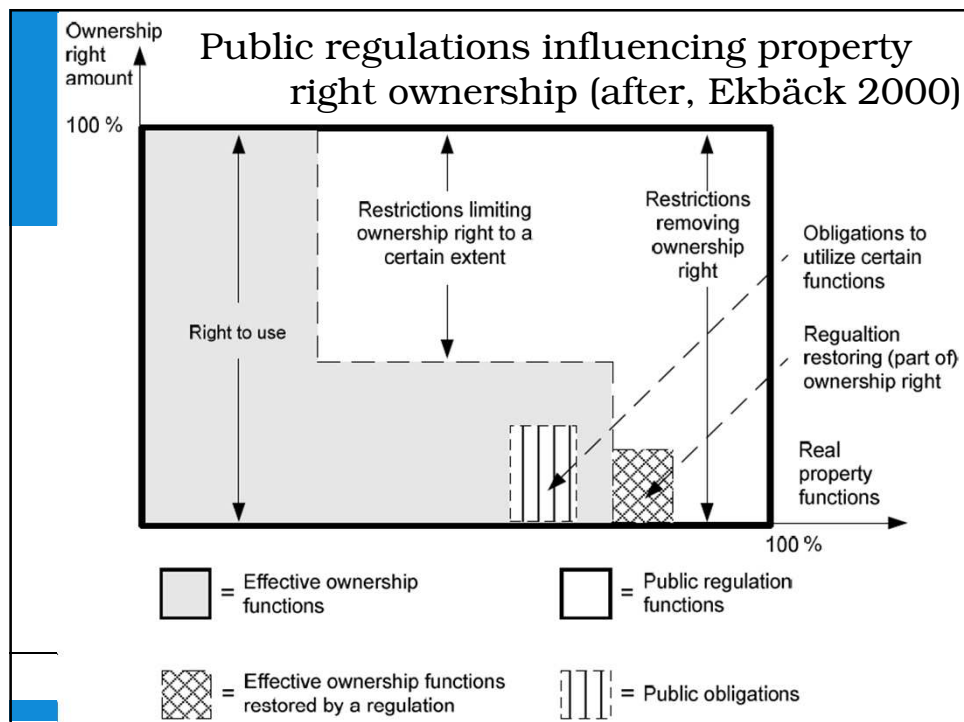

Real property right classes

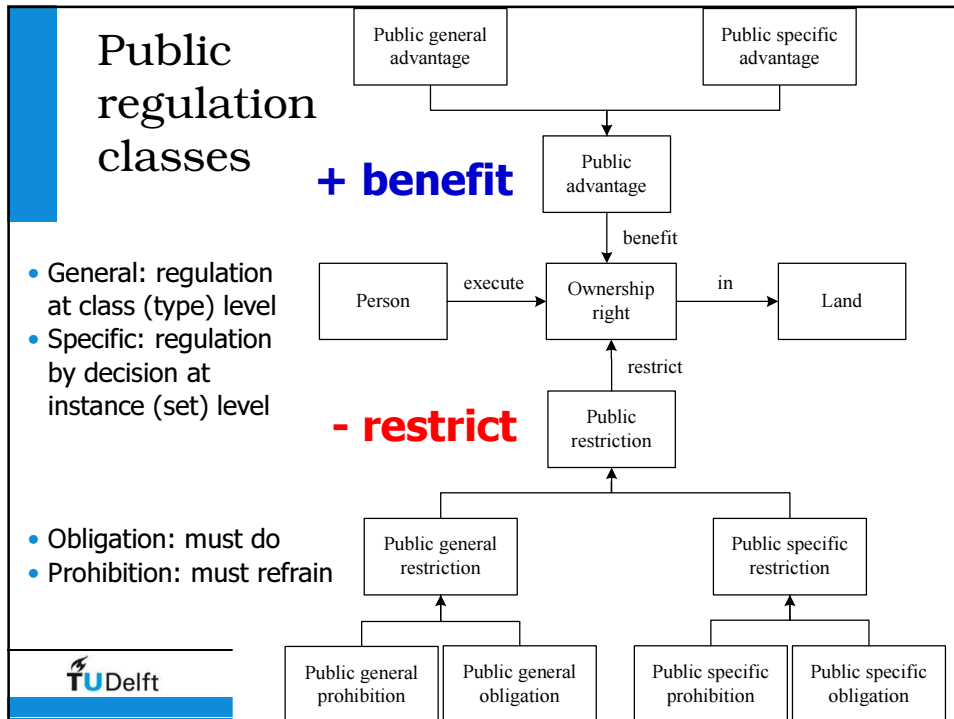

## Private interests in LCDM are divided into five groups, examples

1. Common  
→ e.g. be a property jointly owned by other properties
2. Property to property right  
→ e.g. an easement
3. Person to property right  
→ e.g. a personal use right
4. Latent right (is a right not executed yet)  
→ e.g. a pre-emption right
5. Monetary liability (is a financial claim)  
→ e.g. a mortgage.

Full definitions are provided in PhD-thesis Paasch

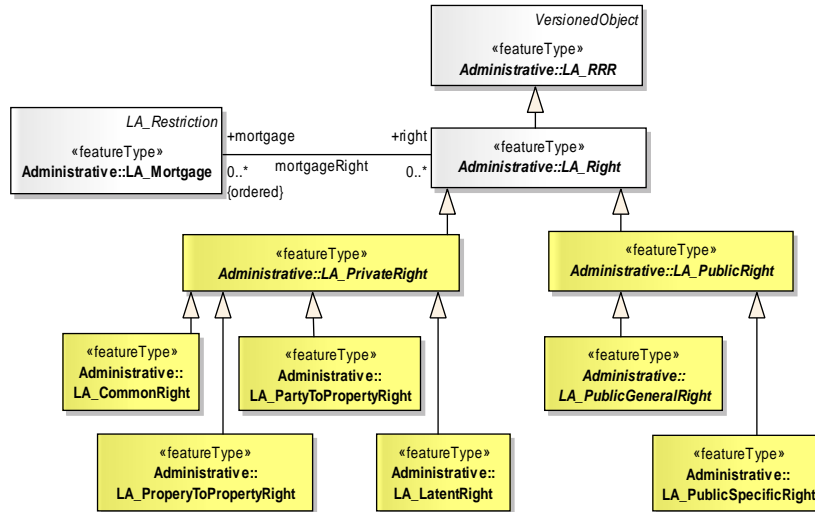

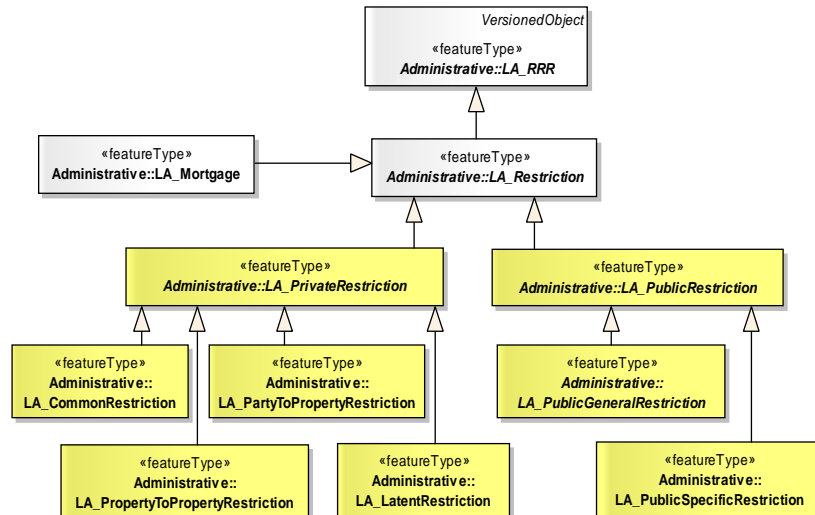

## LADM Legal Profile

- Based on the Legal Cadastral Model Classification
- LCDM naming aligned with LADM terminology
- Monetary liability mapped to LA\_Mortgage (more broad interpretation)
- Modeled in UML class diagrams  
Note the use of *abstract* and concrete classes

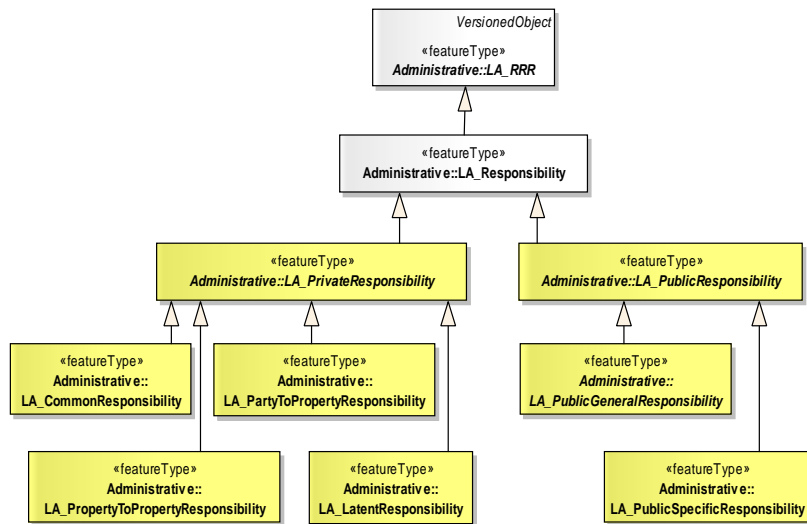

## LA\_Right extended profile for privately and publicly imposed rights

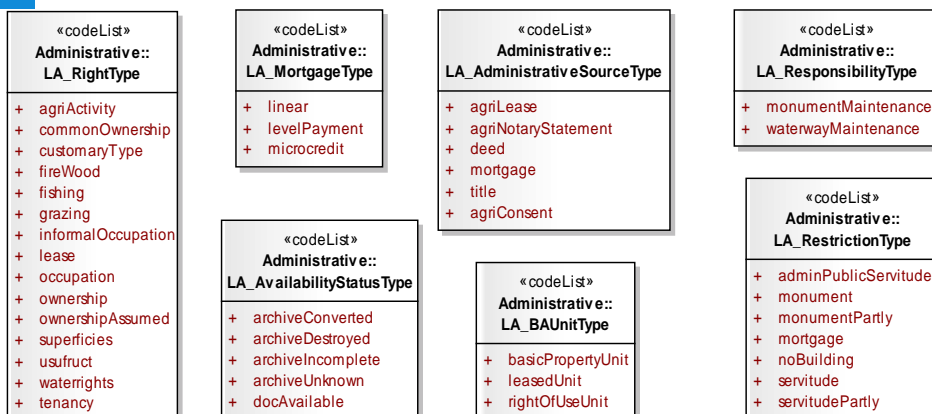

## LA\_Restriction extended profile for privately and publicly imposed restrictions

## LA\_Responsibility extended profile privately and publicly imposed responsibilities

## LADM's current code lists for Administrative Package (annex J.2 )

## Code lists need further structuring and formalization

- Should there for every of the 6 leaf and 2 non-leaf subclasses of LA\_Right be separate code lists?
- Same questions for LA\_Restriction and LA\_Responsibility?
- Can code lists inherit from corresponding parent code lists?
- How to add country specific code list values (related to the standard code list values)?
- How to deal with country profiles in which standard code list are not applicable?
  
- For code lists related to the *abstract leaf* classes: these code list values encode public (general) regulations!

## Summing up

- The extended model is suitable for classification of real property rights and public regulations (at least in Western legal systems), based on the case study results
- The model should be further tested in other legal systems
- Applying the “correct” terminology is important and an ongoing
- Code lists with values for types of rights, restrictions and responsibilities need further structuring and formalization
- LCDM does extend the LADM standard and has been integrated
