The role of recurrent land taxes and revenue trends in Australia

UTCH, New Tet

FIG Working Week Christchurch, New Zealand 2-6 May 2016

Vince Mangioni PhD University of Technology Sydney, Australia

Recurrent land tax and revenues

- What land tax is and is not / salience
- Overview of the tax reform agenda and where land tax fits
- Competing imposts for land tax revenue
- What we need to do to reform land tax

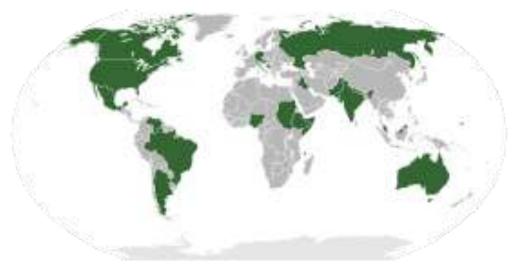

Federated Structure

Australia Canada United States India Brazil Argentina Germany

Unitary Structure

New Zealand Denmark Sweden United Kingdom Chile China Most of African Continent

Structure of Government

Tax reform challenge for Australia

- Low taxing country overall
- Disproportionate tax mix among the OECD countries
 - Aging population
- Centralised tax system (Fiscal Federalism)

OECD tax effort % GDP rankings 34 countries Organisation for Economic Cooperation and Development

| 2012 | Income Tax | GST/VAT | Overall Tax Effort | | |
|--------------|-----------------------|-----------------------|------------------------|--|--|
| Australia | 5 th 15.9% | 29 th 7.7% | 29 th 27.3% | | |
| OECD Average | 11.4% | 10.8% | 33.7% | | |
| Lowest | Slovak Republic | United States | Mexico | | |
| | Denmark | | Denmark | | |
| Highest | Denmark | Hungary | Denmark | | |

The term land tax is often taken to mean different things.

Recurrent tax assessed on a number of different bases

- State land tax
- Local government rates

Transaction tax

Conveyance stamp duty – transaction tax

Bases of value comparison

Property Valuation methods permitted to be applied

| Group ^a | Method | NSW | Vic | Qld | W/A ^b | SA | Tas | NT |
|--------------------|--------------------------------|-----|-----|-----|------------------|----------------|-----|----|
| А | Assessed Annual Value (AAV) | | | | | | ٧ | |
| _ | Annual value (AV) | | | | | ٧ ^c | | V |
| | Capital improved value | | V | | | | | |
| В | Capital value | | | | | V | V | |
| | Improved capital value | | | | | | | V |
| | Gross rental value (GRV) | | | | ٧ | | | |
| С | Net annual value (NAV) | | V | | | | | |
| | Site Value (SV) | | ٧ | V | | ٧ ^c | | |
| D | Land value (LV) | ٧ | | | | | ٧ | |
| | Unimproved capital value (UCV) | | | | | | | ٧ |
| E | Unimproved value (UV) | | | | v | | | |

^a Various terms used across jurisdictions to describe methods that are essentially the same and these are grouped together.

^b Two methods are used in Western Australia, but these are restricted by land type: UV for rural only and GRV for non-rural only. ^c The AV and SV methods can be used in South Australia if the council declared rates for that land on that basis for the previous financial year,

or if the council declares rates for that land on the basis of capital value for the previous three financial years.

Facts and perceptions about land tax

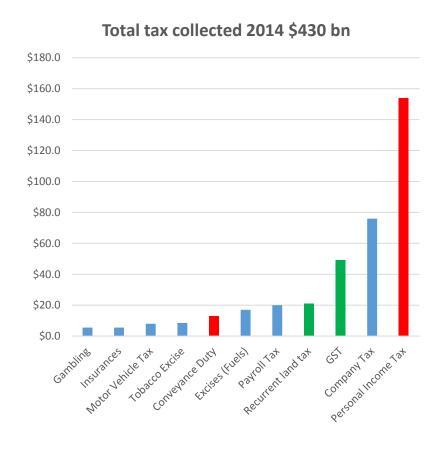

- State land tax
 - Imposed on approx.
 15% of property across Australia
 - Exemptions PPR, Investor threshold and primary production land
 - Viewed as a consolidated revenue tax / non-earmarked

- Local rates
 - Apply to over 98% of property across
 Australia with very few exemptions
 - Much debate over its perception as a benefits received impost vs. capacity to pay tax

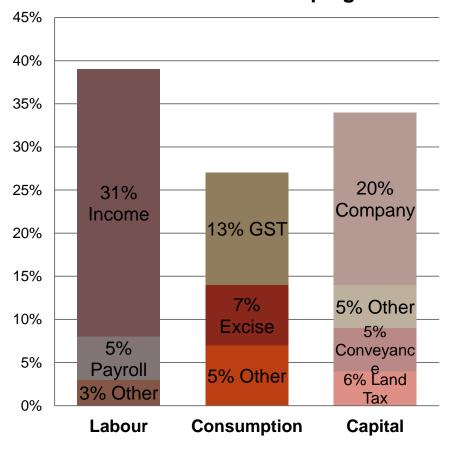

Salience of land tax

- Land tax is one of the more contentious taxes internationally, due to visibility and taxpayer perception. Most PAYEE taxpayers are not custom to paying taxes.
- 80 percent of taxes are near invisible to the taxpayer at point of collection.
- Employers are the largest tax collection agency worldwide:
 - income taxes
 - payroll taxes
- Retailers and service providers include the GST within the cost of goods and services

Tax relativity and volatility: Rates, Land Tax & Conveyance Stamp Duty

Emerging trends NSW & VIC

Rates 2.5-3% p.a.

Rates 6.5-7% p.a.

State control of annual rate increases

Victoria

New South Wales

Rate capping

Rate Pegging

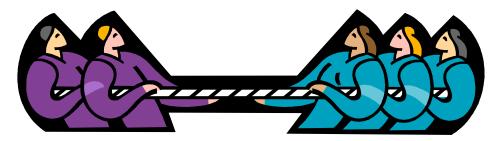

- <u>Restricts increases in</u> <u>rates on a property by</u> <u>property basis</u>
- <u>Restricts increases of</u> <u>total rate revenue</u> <u>within an LGA</u>

Emerging competition

• Which level of government in Australia (state or local) should impose and be the beneficiary of increases in revenue from recurrent land tax.

Can increases be shared between state and local government?

Fiscal lunacy: States imposing rate capping and pegging while imposing state land tax on 15 per cent of property.

AFTS 2010 (Henry Review)

- States need to increase tax revenue from property i.e. principle place of residence.
- Remove / freeze land tax thresholds across all states.
- Levy / tax collected by local government through the rating system on behalf of the States.
 - Rationale for this approach is the perception that local rates are closely aligned to services which impact on the value of property.

(McClusky & Plimmer)

• This is in contrast to state land tax in which there is little or no perceived connection to any services.

Which tier of government imposes, collects and is the beneficiary of this tax

| Country | Improved | Land | Building | Income | Area | Revenue | Revenue |

Key findings of property tax reform Mangioni 2016 'Land tax in Australia: Fiscal reform of subnational government'

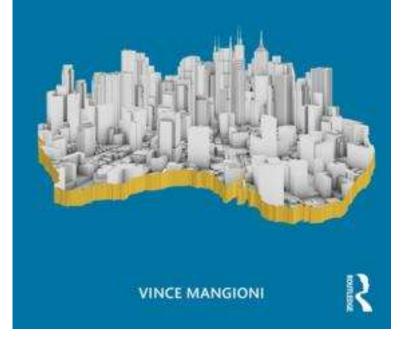

- The two tiered recurrent land tax structure in Australia is outdated and must be reformed with local government becoming the tax administrator and collector of recurrent land tax.
- Options are needed to assess recurrent land tax on more than one basis of value in some states that currently have one basis of value, with consistent biennial or triennial valuation cycles used.
- The progressive increase in recurrent land tax revenue to represent 3 per cent of GDP and approximately 9–10 per cent of total tax collected over the following five to 10-year period
- The progressive reduction of stamp duty rates to half of the present rates over a five-year period, with stamp duty imposed on all property bequeathed through Wills. A means test and provisions are to be made available to defer such payment for a defined period as determined by the states.
- Uniform options to quarantine local government rates above the 3 per cent of taxpayers' income until disposal of the property, with Commonwealth support for local government until outstanding rates are paid or recovered.

Benefits of earmarking land taxes to infrastructure in Australia

- In contrast to education, infrastructure lags behind in Australia as an alternate source of earmarking revenue from land taxes.
- The fact of whether someone uses infrastructure or a specific piece of infrastructure is not the test of whether a taxpayer should contribute to funding it. It is the option value afforded by the opportunity to use it, which is factored into the value of their land that is the best arbiter for the assessment of a land tax.
- Land taxes (rates) are not strictly a benefits-received tax, its not only about ratepayers street or suburb, its about contributing towards the broader tax pool of consolidated
