Working Group Activities and Plans
Working Group 2

Christian Thellufsen
The Danish National Survey and Cadastre
Focus areas

- Legal and institutional frameworks
- Conditions for land administration in post conflict areas
- Simple, low cost solutions
- Interaction between institutions and communities
- Improvements of land tenure security
- Combine formal land delivery process and customary approaches
- Gender-issues
- Disaster risk management
Disaster risk management

FIG publication no. 38

- Risk analysis and assessment
- Knowledge development
- Disaster risk reduction measures
- Early warning
- Emergency management
Other professional groups have humanitarian arms
Is there a need for a humanitarian arm of FIG – a Surveyors Without Frontiers?
Land is a vulnerable resource

Land is the source of all life on earth. However, land is also a vulnerable resource that needs to be managed properly. The Working groups of FIG's Commission 7 focus on this management by looking into the development of advanced cadastral and land administration, the development of innovative, advanced technology in land administration, and the creation of secure land tenure.

Since we need all the help we can in our work, we encourage all to join one or more of the working groups and offer their help. Contact us here. Everyone is welcome!

Welcome to the website
Did we succeed?
The (lack of) progress so far

- Project group has not been formed
- Project plan has not been made
- Seminars have not been planned
- Web-page is not being used or updated

But
- Quebec meeting did bring the subject on the agenda, however no concrete measures was put forward
Why the lack of progress?

- Chairman have had a heavy workload in his own organization
- Concerns on the programs place in the overall FIG strategy
  - Post disaster management is at the moment being discussed in FIG
    - Political/analytical level
    - Action orientated level
What now?

• Proposal to wait for official FIG announcement
• Focus on other subjects for working group 2
  – E.g. seminar and report on experiences from bigger digitization projects in the land administration sector
  – Other?
Working group 2
Development of Sustainable Land Administration

Comment on information management in FIG

• A better forum for communication is needed
• Today the information mechanisms are
  – Untransparent...?
  – Silo build...?
  – Undemocratic...?
  – Out of date...??
Comment on information management in FIG

Working Group on 3D Cadastre
FIG Commission 3 (Spatial Information Management)

Introduction
Current cadastral registrations use 2D parce maps, with corresponding legal restrictions on land. In most cases this is sufficient to meet the needs of real estate. But in cases of multiple use of land, an additional layer of information is required. Thus, the traditional 2D cadastre is not, or only in a limited way, suitable for the management of land in the third dimension.

At the FIG-congress in April 2002 in Washington, the call was made to study the 3D issue of cadastral registration on a higher level.

This working group on 3D Cadastres is a joint effort of three working groups in FIG (as part of Working Group 7.3 (Advanced Technology) and Working Group 7.2 (Adv. Legal Framework)).

Aim
The working group aims to publish a report on the legal, institutional and technical aspects of a 3D cadastre. Reports of the working groups are presented here.

Legal, institutional and technical aspects
The working group is subdivided in three sections: the legal, institutional and technical aspects of a 3D cadastre. Reports of the working groups are presented here.

Working Group Area Commission 7
FIG Commission 7 (Working Group 7.3)

About us
This website displays the progress of work of the three working groups in FIG's Commission 7. Read the work plan of Commission 7 here, and visit the official Commission 7 website here.

Land is a vulnerable resource
Land is the source of all life on earth. However, land is also a vulnerable resource that needs to be managed properly.

The working groups of FIG's Commission 7 focus on this management by looking into the development of advanced cadastral and land administration, the development of innovative, advanced technology in land administration, and the creation of secure land tenure.

Since we need all the help we can get in our work, we encourage all to join one or more of the working groups and offer their help. Contact us here. Everyone is welcome!
