The public’s understanding of a real estate cadastral status and the surveyor’s measurements probative role

Bruno Razza - Italy

Cadastral updating data should be everywhere computerized and transmitted by internet and therefore they have to be correctly codified
FIG Congress 2010
Facing the Challenges – Building the Capacity
Sydney, Australia, 11-16 April 2010
Therefore it is not possible that a common citizen, without any specific technical knowledge, might be able to read and understand the documents registered on the Cadastral Registry.
OLD MEASUREMENTS PRODUCED UNENCRIPTED

THESE NEW TECHNOLOGIES AND THE COMPUTERISED PROCEDURS GENERATE THE ABANDON OF PAPER RECORDING, WRITTEN MEASUREMENTS, DETAILED DESCRIPTIONS, COLOURS AND WHAT, IN THE PAST, WAS USEFUL FOR AN EASY AND CORRECT INTERPRETATION OF BOTH TECHNICAL AND LEGAL CONTENTS
Place of measurements
Measurements produced

“Standardized”

Measurements produced

“Unencrypted”
Unencrypted representations, as support of a modern Cadastre, represent the way to create (thanks to Surveyours) a new and regular archive of the probative age.

Thank you for your polite attention.

Bruno Razza - Italy
