Land tenure in society

- land tenure/property is of fundamental interest of citizens
- land tenure/property is essential for keeping economy alive
- tenure should be a fundamental right of citizens
- no security of interests without "registration"
- registration needs
  - acceptance of property models by society
  - awareness about value of land and benefits
  - political willingness
  - a legal framework / tools
  - technology
- society trust systems rather than stakeholders

A product by professionals
Cadastre as part of Society – Society as part of Cadastre

Cadastre in society

- cadastre provides a feeling of security to land owners
- strong personal relationship between land owners / beneficiaries and professionals
- cadastre is a „local service“
- public authorities and professionals in private practice keep most of the information
- public sector still keeps most of the information
- professionals are considered powerful
- high responsibility to create confidence
- cadastral information is an asset for creating business
- more and more awareness about sensitive data
Cadastre as part of Society – Society as part of Cadastre

Society becomes part of cadastre

- awareness
- technology
- participation
- shareholder

People first – Performance now!
Cadastre as part of Society – Society as part of Cadastre

Cadastre - a product by society

- land owners/citizen primary information provider
- land owners/citizen as core stakeholders
- web 2.0 tools / open source technologies
- society products / substitutes
- society creates their own "regulations"
- user groups get part of business processes
- society takes a role as producer as well as user
- who takes role as facilitator and moderator?
- citizen are owner of information
- power moves to land owners / society / service providers
- confidence?
Society as part of cadastre

- who is the owner of (individual) data
- participative business models
- data is an asset / fair distribution of revenues
- keep selective with collection of data
- facilitate integration of society
- transparent processes
- publicity of information / culture
- new monopolies of power
- keep information accessible and affordable
- track own data and history, who and when? (5D)
- risk assessment (web, IT, devices, dependencies)
Cadastre as part of Society – Society as part of Cadastre

Participative business model
