Outline

- ❖ Introduction
- ❖ National Tree Canopy Map Generation
- ❖ Tree Canopy Cover & Shade Maps
- ❖ Summary & Future Work

Introduction I

- ❖ Era of global challenges
- ❖ **Data** and **Science-based** decisions
- ❖ Geospatial data - facilitator of informed strategies
- ❖ **Climate Change** – global cause of concern
- ❖ **Cities and Urban concentrations** – mostly affected by climatic transformation
- ❖ **Urban Heat Island – UHI**

Introduction II

- ❖ Urgent need for urban-scale adaptation solutions
- ❖ Urban forest – key *heat mitigation* measure
 - *Shade-giving trees*
 - *Critical resource and infrastructure to be preserved and expand*
 - *Solar radiation absorption*
 - *Heat mitigation – urban forestry plans*
- ❖ High resolution systematic *Tree Canopy Cover (TCC)* mapping

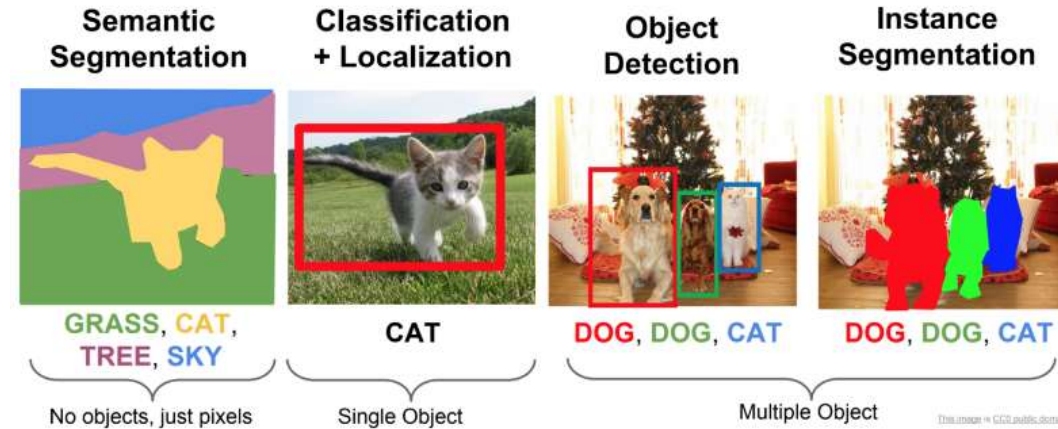

National Tree Canopy Map Generation I

❖ Government Decision 1022

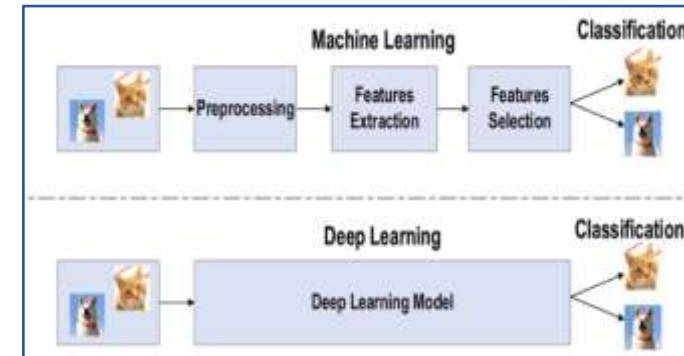

- *Shading and cooling of urban space using trees*
- *Urban Forest Inventory*
- *Tree Canopy Cover (TCC) calculation*
- *Preparation of Operational Plan by local authorities*

❖ TC & TCC production for cost estimation by *Survey of Israel*

- *Top-down approach for UTC assesment based on DL techniques*
- *Transfer Learning (U-net Convolutional Neural Network pretrained on IMAGENET)*
- *Semantic Segmentation method*

Detection, Classification vs. Segmentation

Deep learning vs. Traditional Machine Learning (Alzubaidi et. al., 2021)

National Tree Canopy (TC) Map Generation II

❖ Mask Production

- *Orthophoto tiles - manual digitization of TC*
- *Masks dataset - rasterization of vector data (GDAL library)*
- *SOI Orthophoto*
 - ✓ 20 cm per pixel
 - ✓ 4 bands (RGB + NIR)

❖ Training Set

- *Pairs of orthophoto tiles + B&W masks*
- *RGB bands were used*

Image Folder

Masks Folder

Training Set

National Tree Canopy Map Generation III

❖ Prediction

- *New raster image*
- *Manual quality control – ground truth*
- *Precision rate 96%*

$$\text{Precision} = \frac{\text{True Positive}}{\text{All Predicted Positives}} * 100\%$$

$$\text{Precision} = \frac{TP}{TP + FP} * 100\%$$

Diamond Sponsors

Tree Canopy Cover & Shade Maps I

❖ Street Tree Canopy Cover

- *TCC ratio*

- ✓ [0 to 1] scale – *TC total projection area/the total area of the same space (segment)*

- *Important tool for planning future tree planting and urban forestry management*

- *Indicator of street-level shade originating from trees*

Kefar Saba
High TCC

Bat Yam
Low TCC

Tree Canopy Cover & Shade Maps II

❖ Shade Index - SI

- *Quantitative evaluation of shade provision*
 - ✓ [0 to 1] scale – **blocked** insolation at ground level/max insolation of an **unobstructed** horizontal surface (reference)
- *Considers all urban elements that cast shadow*
 - ✓ *Trees*
 - ✓ *Buildings*
 - ✓ *Other major objects*

$$SI_p = 1 - \left(\frac{Insolation_p}{Insolation_r} \right)$$

Be'er Sheva
Low SI

Akko
Low SI

Tree Canopy Cover & Shade Maps III

❖ Neighborhood Shade Index and TCC mapping

- *Shade Index vs. Tree Canopy Cover maps Comparison*
- *Trees availability & outdoor shade correlation*

Bat Yam

Shade Index

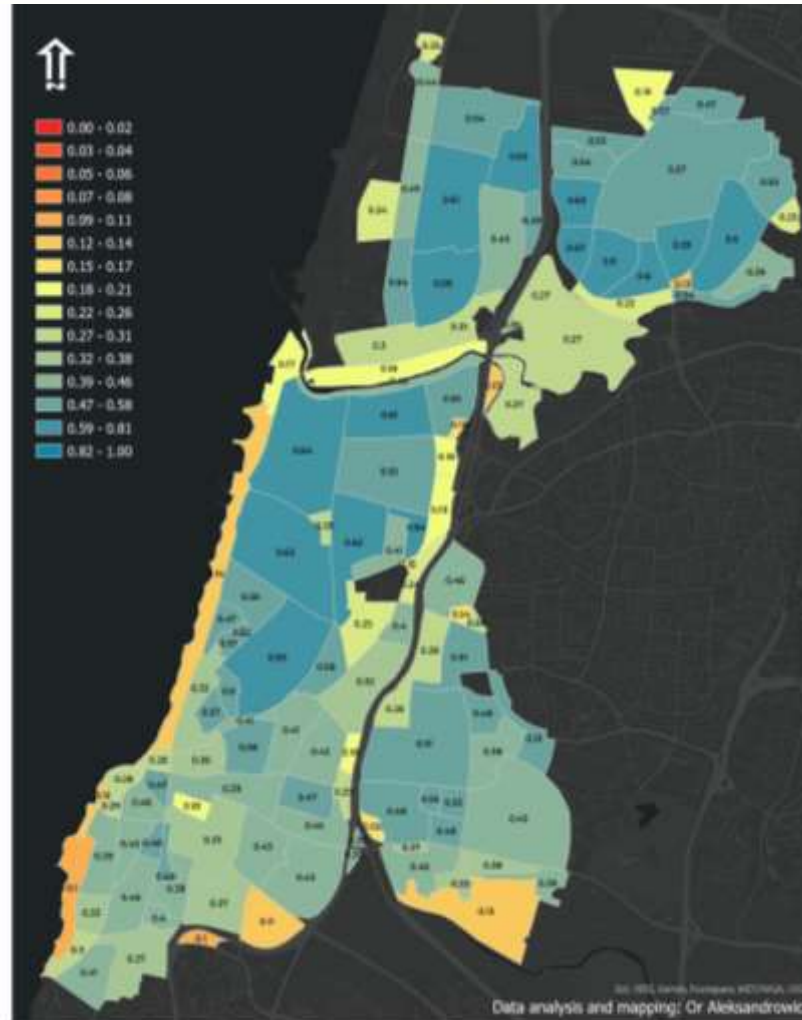

Tree Canopy Cover

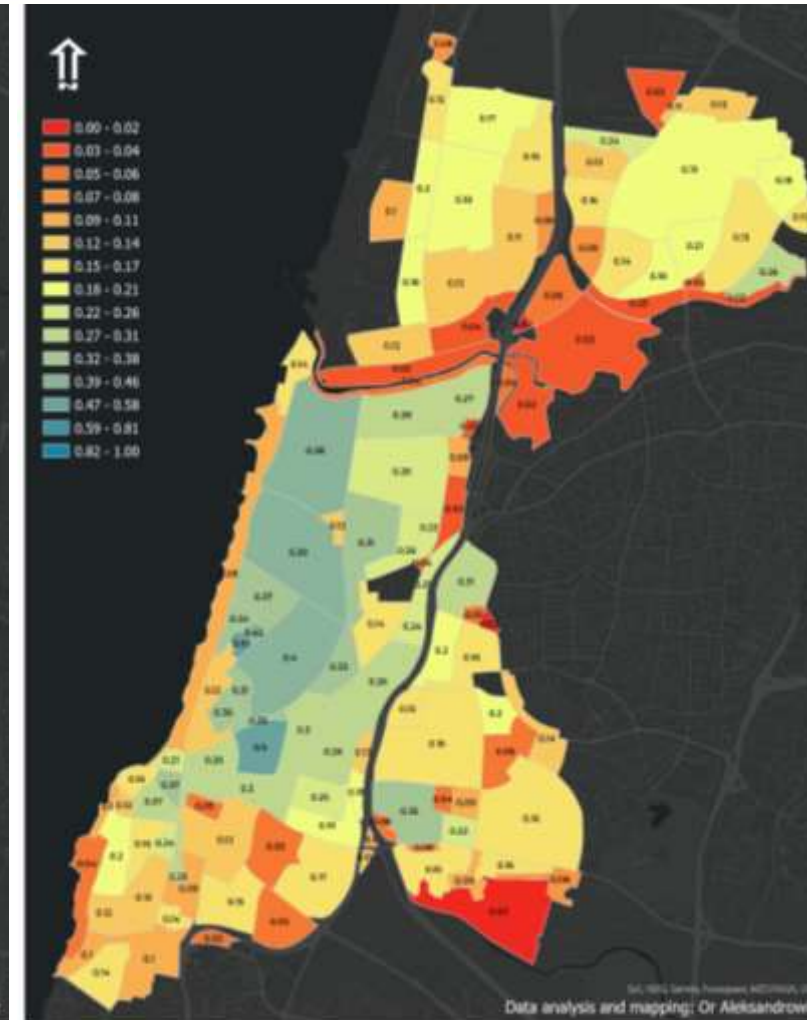

Tree Canopy Cover & Shade Maps III

❖ Neighborhood-level Shade Index mapping

- *Shading effect of trees*
- *Exclusion of trees from SI calculation is facilitated by the comprehensive tree canopy mapping*

SI inc. Trees

SI excl. Trees

Summary & Future Work

- ❖ **Geodata** holds an enormous potential in addressing the negative effects of climate change
- ❖ **Informed and knowledge-based** decisions
- ❖ Fine-tuning of the TC algorithm
- ❖ **National TCC & Shade** maps (**SI**)
- ❖ Tree Planting Potential research
- ❖ **Digital Platform** – urban planting scenarios
