

Inspiring Future Geospatial Experts

Ball Elaine (United Kingdom)

Key words: Education; Young surveyor; Get kids into survey, education

SUMMARY

The "Get Kids Into Survey" initiative aims to introduce and engage children in the fascinating world of geospatial science, such as surveying, mapping, and remote sensing. These play a crucial role in understanding our planet and solving real-world challenges. This educational program focuses on fostering curiosity and enthusiasm among children, aged 8 to 12, by offering hands-on activities, and educational resources.

The abstract outlines the significance of introducing geospatial science to young minds, emphasising the long-term benefits of nurturing their interest and potential career opportunities in the field.

The "Get Kids Into Survey" initiative seeks to inspire the next generation of surveyors and geospatial professionals, fostering a deeper connection to their environment and encouraging them to become informed global citizens.

The paper will document how Get Kids into Survey started, what the current plan is and future strategy to be implemented. How Surveyors and the wider Geospatial community can get involved to improve the take up of Surveyors across the globe.
