Proceedings

11th International FIG Symposium on Deformation Measurements

Santorini (Thera) Island, Greece, 25-28 May 2003

Edited by
Stathis C. Stiros and Stella Pytharouli

Publication no 2
Geodesy and Geodetic Applications Lab.
Dept. of Civil Engineering, Patras University

Patras, October 2003

Sponsors

The organization of the Symposium and the publication of this Proceedings Volume became possible thanks to the support of:

Main sponsors:

ERGOSE –Hellenic Railroad Construction Works SA, Athens
Hellenic Ministry of the Aegean

Other sponsors:

Silver and Barite Ores Mining Co SA (www.s.andb.gr/mainen.html)
Hellenic Ministry of Culture (www.culture.gr)
Athens Metro SA (www.ametro.gr)
CCGE- University of New Brunswick (www.unb.ca/GGE/)
Patras University (www.upatras.gr)

Scientific Committee

Anagnostopoulos, A., Athens	Kasser, M., Paris
Bock, Y., San Diego	Kato, T., Tokyo
Brunner, F., Graz	Mair, R., Cambridge
Chen, Y.Q, Hong Kong	Marinos, P., Athens
Chrzanowski, A., New Brunswick	Niemeir, W., Braunschweig
Dodson, A., Nottingham	Prescott, W., Menlo Park
Fyticas, M., Thessaloniki	Proszynski, W., Warsaw
Jin, F., Shandong	Rizos, C., Sidney
	Savvaidis, P., Thessaloniki

Organizing Committee

V. Kontogianni, Dept. of Civil Engineering, Patras University, Patras
A. Koutsouveli, Institute of Geology and Mineral Exploration, Athens
M. Liatsou, Heliotopos Conference Organizers, Athens
S. Papageorgiou, TAP, Ministry of Culture, Athens
S. Pytharouli, Dept. of Civil Engineering, Patras University, Patras
S. Stiros, Dept. of Civil Engineering, Patras University, Patras
P. Triantafyllidis, Dept. of Civil Engineering, Patras University, Patras
G. Vougioukalakis, Institute of Geology and Mineral Exploration, Athens

Logistic support:

Heliotopos Conference Organizers (www.heliotopos.net)

Typesetting and printing:

C.Mentis, cStudio, Athens

Contents

PREFACE

INTRODUCTION

Goals and achievements of FIG working group WG6.1

- Deformation Measurements and Analysis

Chrzanowski A., Ding X., Roberts G., Whitaker C.

TECTONOPHYSICS & SEISMOLOGY

Utilization of Continuous Operating Reference Stations (CORS) in Southern California for Deformation Monitoring

Duffy M., Whitaker C.

Monitoring Vertical Movements in Mount Carmel Region

Even-Tzur G.

Geodetically derived displacements and crustal deformation analysis.

Application in the Volvi area

Fotiou A., Kagiadakis V., Pikridas Ch., Rossikopoulos D.

Monitoring local geodynamical movements and deformations by borehole tiltmeters in Hungary

Mentes G.

Geodetic Monitoring of slow Deformations in a seismically active Region

Zippelt K.

Deformation studies in the Corinthian gulf via multi-epoch analysis of geodetic data

Agatza-Balodimou A.M., Avallone A., Briole P., Karamitsos S., Marinou A., Mitsakaki C., Papazissi K., Veis G.

Geodynamic investigations along the Mecsek-fault in Hungary using precise geodetic devices

Bányai L.

Searching for Interrelation between Deformation and Stress Distribution in the Shallow Basement

Czarnecka K.

Study on deformation parameter in Poland obtained from tectonophysics and GPS data analysis

Klek M., Jarosinski M., Rogowski J.,

Geodynamic research concerning recent movements in the Karkonosze MTS. and Karkonosze foreland

Makolski K., Mierzelewski M., Bosy J.

Geodynamics and Deformations of the sudetic geological structural blocks

Schenk V., Jechumálova Z., Scheňkova Z., Bosy J., Pavel K

APPLICATIONS IN VOLCANOLOGY

Numerical computation of deformation field in volcanic areas

Giberti G., Russo G.

Monitoring and deformation analysis in Neapolitan volcanic area

Pingue F., Del Gaudio C., De Natale G., Obrizzo F., Sepe V., Cecere G., De Martino P., Malaspina S., Serio C., Siniscalchi V., Tammaro U.

Geodetic evidence for slow inflation of the Santorini caldera

Stiros S., Chasapis A., Kontogianni V.

INSAR

Deformation monitoring using remotely sensed radar interferometric data

Crosetto M., Arnaud A., Duro J., Biescas E., Agudo M.

Subsidence monitoring using contiguous and PS-InSAR: quality assessment based on precision and reliability

Hanssen R.

Integration of leveling and INSAR data for land subsidence monitoring

Odijk D., Kenselaar F.

The derivation of phase integer ambiguity from single INSAR pairs: Implications for differential interferometry

Sowter A.

Small Scale Surface Deformation Monitoring in Mining Regions Using Differential Radar Interferometry

Baran I., Stewart M.

Identification and measurement of mining subsidence with SAR interferometry: potentials and limitations

Perski Z.

Differential Radar Interferometry for Mine Subsidence Monitoring

Ge L., Rizos C., Chang Hsing-Chung, Qin L., Chen Ming-Han

INSTRUMENTATION & NEW TECHNIQUES

Structural deformation measurement using terrestrial laser scanners

Gordon S. J., Lichti D. D., Stewart M. P.

A novel method of high precision height determination for industrial applications

Radovanovic R.S., Teskey W.F.

Real-Time monitoring of Highway Bridges using DREAMS

Hein G.W., Riedl B.

ALERT: A fully automated real-time monitoring system

Wilkins R., Bastin G., Chrzanowski A.

New monitoring techniques on the determination of structure deformations

Stathas D., Arabatzi O., Dogouris S., Piniotis G., Tsini D., Tsinis D.

Documentation and presentation of very steep rocky ground surfaces by geodetic methods

Balodimos D. D, Lambrou E., Pantazis G.

GPS data stacking for small scale GPS deformation monitoring applications

Forward T., Stewart M. P., Tsakiri M.

Precise method gyrotheodolite azimuth determination

Kebbeih Y.

Experimental assessment of the accuracy of GPS Kinematic Techniques for monitoring movements / oscillations of flexible engineering structures

Nikitopoulou A., Protopsalti K., Kontogianni V., Triantafillidis P., Stiros S.

Procedure for deformation detection using starnet

Setan H., Mohd Sharuddin I.

APPLICATIONS IN GEOTECHNICAL & MINING ENGINEERING

Stability investigations of the high bank of river Danube in the area of Dunaföldvár

Bányai L.

Use of geodetic monitoring measurements in solving geomechanical problems in structural and mining engineering

Szostak-Chrzanowski A., Chrzanowski A., Massiéra M.

Long term geodetic monitoring of the deformation of a liquid storage tank founded on piles

Savaidis P.

Monitoring of a landslide in Vorarlberg/Austria

Depenthal C., Schmitt G.

A digital close-range photogrammetric technique for monitoring slope displacements

Stylianidis E., Patias P., Tsioukas V., Sechidis L., Georgiadis Ch.

A dynamic analysis method regarding underground water level changes as causative force for creep landslides:

A case study for north eastern Black Sea region's landslides, in Turkey

Yalçankaya M., Bayrak T.

Automatic real-time monitoring system (ARMS) – A robotic solution to slope monitoring

Leung Kin-wah

A feasibility study into the requirements and methods of monitoring deformation in the Niglintgak region of the Mackenzie delta

Tait M. , Moorman B.

Ten years of deformation study and proposed research program for the area of Polish cooper basin

Oszczak S., W. Alojzy, R. Zofia, Szostak-Chrzanowski A., Chrzanowski A.

Settlements of an embankment founded on a soft soil

Zvanut P.

Unloading-reloading uniaxial compressibility of deep reservoirs by marker measurements

Ferronato M., Gambolati G., Teatini P.

Natural tectonic hazards for engineering structures in the region of Lower Silesia

Kontny B., Dyjor S., Cacon S.

Detection of landslide block boundaries by means of an affine coordinate transformation

Haberler M., Kahmen H.

Measurement of surface deformation associated with hydrofracture

Saleh B., Sadoon B., Blum P.A.

TUNNELS

Monitoring and modeling ground deformations during tunneling

Kavvas M..

Evaluation Of deformation measurement in Powerhouse cavern in Masjed Soleiman dam

Jafari A.

Tunnel monitoring during the excavation phase: 3-D kinematic analysis based on geodetic data

Kontogianni V., Stiros S.

Absolute deformation profile measurement in tunnels using relative convergence measurements

Moosavi M.

STUDIES OF ANCIENT AND HISTORICAL REMAINS

Monitoring of displacement of wide range focused on historical buildings and slopes

Zalesky J., Voborilova P., Pruska J., Prochazka J.

Ancient constructions as markers of tectonic deformation and of strong seismic motions

Bottari C.

Traces of historical earthquake in Wittstock, Northern Germany

Korjenkov A., Kaiser D.

Identification of the pattern of an atypical ancient theater using analytical techniques

Psimoulis P., Stiros S.

THEORETICAL ASPECTS – ANALYSIS OF GEODETIC NETWORKS

A kinematic analysis program for deformation monitoring

Bayrak T., Yalçinkaya M.

An engineering approach of a traditional geodetic topic.

The geoid as height reference and its other possible uses

Doufexopoulou M.G.

Kalman-filtering with coloured measurement noise for deformation analysis

Kuhlmann H.

From geodetic monitoring to deformation tensors and their reliability

Michel V., Person T.

Imprecision in geodetic observations - Case study GPS monitoring networks

Schön S., Kutterer H.

A study on using Bayesian statistics in geodetic deformation analysis

Yalçankaya M., Tanir E.

Is minimum-trace datum definition theoretically correct as applied in computing 2D and 3D displacements?

Proszynski W.

Estimation of elements' tolerances in precast concrete buildings.

Using geodetic control networks

Georgopoulos G. D., Telioni V.

Mathematical investigation of calculation zones in the large industrial excavations and embankments

Piasek Z.

Numerical adjustment of profile line on mathematically approximated terrain surface

Piasek Z., Siejka M.

Kinematic modelling of subsidences

Telioni V. C.

Precise measurement and 3D modelling for industrial applications

Setan H., Mohd Sharuddin I.

MONITORING STATIC AND DYNAMIC DEFORMATIONS OF ENGINEERING STRUCTURES

Real-time seismic monitoring instrumentation needs of a building owner and the solution

- A cooperative effort

Celebi M. , Sanli A., Sinclair M., Gallant S., Radulescu D.

A remote bridge health monitoring system using computational simulation and GPS sensor data

Roberts G., Meng X., Meo M., Dodson A., Cosser E., Iuliano E., Morris A.

Monitoring of bridge deformations using embedded fiber optical sensors

Lienhart W., Brunner F.

The monitoring of bridge movements using GPS and pseudolites

Barnes J., Rizos C., Wang J., Meng X., Cosser E., Dodson A., Roberts G.

Real-time bridge deflection and vibration monitoring using an integrated GPS/Accelerometer/Pseudolite system

Meng X., Roberts G.W., Cosser E., Dodson A.

Loading tests of highway bridges in Slovakia

Kopacik A.

Predicting creep deformation of concrete:

A comparison of results from different investigations

Fanourakis G. C., Ballim Y.

Vision-based, Multi-Epoch deformation monitoring of the atrium of Federation square

Fraser C., Brizzi D., Hira A.

Measuring dynamic deformation of bridges using a total station

Cosser E., Roberts G. W., Meng X., Dodson A.

The comparison of single frequency and dual frequency GPS for bridge deflection and vibration monitoring

Cosser E., Roberts G.W., Meng X., Dodson A.

Testing procedures for the monitoring of seismic induced vibrations on a cable-stayed highway bridge

Tsakiri M., Lekidis V., Stewart M., Karabelas X.,

Rigidity control of a thin reinforced concrete dam

Pitharouli S., Tsitsos V., Skourtis C., Kontogianni V., Stiros S.

Deformation detection of lightweight concrete block using geodetic method and non-geodetic method

Setan H., Md Som Z., Idris K. M.
