Technology behind the service

Intelligent data entry, superfast searching (fingerprint procedure)

Entry:

Road transport

A program searches the text. It weights words, such as "car" in this case

Result

- car (important)
- road (important)
- aircraft (unimportant)
- etc

The words are used to generate a fingerprint.
The fingerprint is stored in a database.

Search:

Search:

car, road, ... etc

or:

The keywords or texts are used to generate a fingerprint.

The fingerprint is compared with the fingerprints in the database.
The compatible fingerprints are output as text.
